MESSAGE FROM THE SECRETARY GENERAL OF THE CARIBBEAN COMMUNITY

"I particularly wish to add my support to the call of CDEMA to our Member States to recognise the critical linkages between investment in the strengthening of the resilience of our countries and communities and reducing our social and economic losses from hazard impacts."

The Caribbean Community (CARICOM), having recognised the critical link between disaster events and the sustainable development of our Member States, decided in 1991 to take concrete actions by endorsing the establishment of a specialised disaster management agency then called the Caribbean Disaster Emergency Response Agency (CDERA).

Since its establishment, CDERA, now the Caribbean Disaster Emergency Management Agency (CDEMA), has played a sterling role as the region’s premier organisation for Disaster Risk Management. The Agency has led the way in the development of a more organised framework for the management of disasters in our region. Due to the efforts of CDEMA, there is now more awareness and support for disaster management and in particular the Comprehensive Disaster Management (CDM) Strategy and Framework across the region at all levels. To date the Strategy and Framework has been through two iterations, corresponding to two implementation periods. Over the past year, CDEMA has undergone an extensive consultation process with key stakeholders across the Region in the development of the third iteration of the CDM Strategy which will cover the period 2014 - 2024.

As I applaud CDEMA for being a regional champion and broker for CDM, it should be noted that Advancing Disaster Management and Mitigation is one of the initiatives identified in the Strategic Plan for the Caribbean Community 2015-19 which was approved by Heads of Government last July in Antigua and Barbuda. The Plan outlines six integrated strategic priorities, one of which is Building Environmental Resilience within which advancing disaster management and mitigation fall. A key component of this initiative is the integration of CDM into national policies, strategies and legislation which emphasises the essential nature of CDEMA’s role.

Importantly, the CDM Strategy 2014 - 2024 maintains linkages with key international and regional development agendas that Member States of CARICOM have ratified. These include the Hyogo Framework for Action, the Millennium Development Goals, the Regional Framework for Achieving Development Resilient to Climate Change 2009 - 2015 and the CARICOM Regional Framework 2005 – 2015. The priority thematic areas which the CARICOM Regional Framework seeks to promote, continues to be of significance in the revised CDM strategic period as the region builds capacity in hazard mapping and vulnerability assessments (HVA), Community Based Disaster Management, early warning systems, climate change, vulnerable populations and knowledge management. The new Regional CDM Strategy therefore is a critical policy framework that supports the advancement of the overall regional development priorities.

I particularly wish to add my support to the call of CDEMA to our Member States to recognize the critical linkages between investment in the strengthening of the resilience of our countries and communities and reducing our social and economic losses from hazard impacts.

I encourage us all to take ownership of the new CDM Strategy and the achievement of the regional results which it articulates.
Comprehensive Disaster Management (CDM) is a paradigm shift from a reactive approach to disaster management, to an anticipatory approach. CDM also involves a shift from focusing on individual hazards to viewing hazard exposure as an ongoing process and aims to reduce vulnerability across all sectors.

Some key features of Comprehensive Disaster Management are that it (i) recognizes that strengthening preparedness for better response is critical, (ii) considers all types of hazards, (iii) addresses all phases of the disaster management cycle, i.e. prevention, mitigation, preparedness, response, recovery and rehabilitation, (iv) promotes a “culture of safety”, (v) encourages strategic partner alliances, and (vi) advocates for the empowerment of sector partners to take responsibility for promoting and leading the advancement of CDM in their constituencies.

The CDEMA Coordinating Unit is pleased to be the broker for the Regional CDM Strategy and Results Framework 2014 - 2024. We recognise that we are at a critical juncture as a region and as an organisation. As a region, we continue to face the challenge of being vulnerable to a range of hazard types which is daily being influenced by global climate change as well as human factors related to development. As an Agency, we are fully cognizant of and remain committed to our mandate to advocate for and support the strengthening of the capacity of our Participating States for preparing for and mitigating these disaster risks, and to coordinate response to emergencies should they arise. At the same time, we recognise that we are currently operating in a constrained economic environment, and therefore there is a need streamline our interventions in order to increase the effectiveness of our implementation and our use of limited resources, and to be better accountable to our partners.

In view of these realities, CDEMA strongly advocates that achieving the vision of a disaster resilient and sustainable Caribbean – the overall goal of the CDM Strategy 2014 – 2024 - is contingent upon the building and maintenance of strong partnerships among all CDM stakeholders. On that note, I wish to take this opportunity to thank you our partners for your demonstrated commitment through the years and welcome you to continue to be a key partner on the “journey into tomorrow”.

I wish to take this opportunity to thank you our partners, for your demonstrated commitment through the years and welcome you to continue to be a key partner on the “journey into tomorrow”.
ACKNOWLEDGEMENTS

The Caribbean Disaster Emergency Management Agency (CDEMA) is grateful to the consulting team of Sage Consultancy Services - Mr. Joseph Smith Abbott, Mr. Donovan Gentles and Mrs. Marlene Smith-Barrett - who supported the process in elaborating the CDM Strategy and Results Framework 2014 - 2024 (hereafter referred to as the CDM Strategy 2014 - 2024).

The elaboration of the 10-year CDM Strategy required extensive input and collaboration from the following development, regional and national partners who participated and gave freely of their expertise and knowledge - National Disaster Coordinators, members of the CDM Expert Panel, the CDM Coordination and Harmonisation Council, the Gender Working Group, the established Sector Sub-Committees (Health, Tourism, Education, Agriculture, Civil Society) and the emerging sector sub-committees (Finance and Economic Development and Physical and Environmental Planning).

Members from these stakeholder groupings participated in an initial stakeholder consultative meeting, which took place in June 2013 in Barbados where the revised Logic Model was considered and refined. The meeting representatives were from the following agencies: NODS (Antigua and Barbuda), DDM (Anguilla), DEM (Barbados), NEMA (The Bahamas), ODM (Commonwealth of Dominica), NaDMA (Grenada), CDC (Guyana), NEMO (St. Vincent and the Grenadines), NEMA (Saint Kitts and Nevis), DDME (Turks and Caicos Islands), DDM (Virgin Islands), CDP (Haiti), DMCA (Montserrat), ODPM (Trinidad and Tobago), ODPEM (Jamaica, CCCCC, DRRC-UWI, UWI (ICSAC – Barbados), CCEO, DFATD, CPDC, UK Aid, Delegation of the European Union to Barbados & OECS, IFRC, PAHO, UNDP CRMI, UNDP, UNISDR and CDEMA.

A subsequent meeting took place in October 2013 in Barbados where the Logic Model was further refined and the Performance Monitoring Framework was considered and reviewed. Representatives from the National Disaster Coordination Offices included NODS (Antigua and Barbuda), DEM (Barbados), ODM (Dominica), NaDMA (Grenada), CDC (Guyana), CPD (Haiti), ODPEM (Jamaica), DMCA (Montserrat), NEMA (Saint Kitts and Nevis), NEMO (St. Vincent and the Grenadines), ODPM (Trinidad and Tobago), DDME (Turks and Caicos Islands) and DDM (Virgin Islands).
The Private and Finance Sectors included CDB, Caribbean Risk Managers Ltd/ CCRIF, and CCCU. The Physical Planning and Economic Development Sector included CCEO. Members of the Education Sector Sub-Committee included DRRC-UWI, University of Guyana, UTECH, UNICEF and CAS. Members of the Civil Sector Sub-Committee included CPDC, IFRC - Caribbean Regional Representation Office, ADRA Caribbean, HelpAge International and CANARI. The Health Sector Sub-Committee included Ministry of Health – Jamaica and Ministry of Health – Saint Lucia. The Agriculture Sector Sub-Committee included CABA, CAFAN, CCCCC, IICA and CFNO. The Tourism Sector Sub-Committee included Ministry of Tourism - The Bahamas. Members of the CHC included DFATD, DFID Caribbean, Delegation of the European Union to Barbados & OECS, UNDP and OECS. Members of the CDEMA CU included Ronald Jackson (Executive Director), Elizabeth Riley (Deputy Executive Director), Andria Grosvenor (Alliance & Cooperation Services Manager), Dr. Elvis Nurse (Director – Resource Management & Administration Division), Oronde Lambert (ICT Manager), Donna Walker (HR Manager), Joanne Persad (Programme Manager-Response and Recovery), Robert Harewood (Programme Manager-Response and Recovery), Donna Pierre (Mitigation and Preparedness Specialist – Roving Technical Support Team), Claudine Roberts (Community Disaster Planning Specialist – Roving Technical Support Team), Atiba Morris (ICT Support Specialist), Patricia Maughan (Project Coordinator – RPG2), Stacy Harris (Conference Coordinator), Cisne Pascal (Programme Coordinator – CDM HIP), Ricardo Yearwood (Programme Officer – CDM HIP), Gayle Drakes (Programme Officer – CDM HIP), Saudia Rahat (Senior Programme Officer – CDM HIP) and Michelle Harris (Secretary – CDM HIP).

CDEMA also expresses its appreciation to the UK Department for International Development (UK Aid), the Canadian Department of Foreign Affairs, Trade and Development (DFATD) and the Australian Department of Foreign Affairs and Trade (DFAT) for the financial support provided for the process and publication of the report through the Comprehensive Disaster Management Harmonised Implementation Programme (CDM HIP), Phase 1.

Above all, this plan is drafted with the paramount concern and unflinching desire that it should make a difference in the lives of Caribbean people; that through the collective efforts of national, regional and international partners, who have decided to harmonise plans and pool their resources that lives, livelihoods and property will be saved from the ravages of disasters and hazard events, which impact our region and do not discriminate in their outcome by class, gender, political status or age.

SAFER, MORE RESILIENT AND SUSTAINABLE CDEMA PARTICIPATING STATES THROUGH COMPREHENSIVE DISASTER MANAGEMENT.
EXECUTIVE SUMMARY

The strategic objective of CDM is the integration of disaster management considerations into the development planning and decision-making process of CDEMA’s Participating States (PSs).

The strategic period has been lengthened from five to 10 years to reflect the reality that meaningful developmental change at the community and sectoral levels takes time. The CDM Strategy 2014 - 2024 builds on the strengths of well-founded and functional governance structures. It is designed to continue the process of embedding and institutionalising CDM as the Caribbean’s platform for achieving risk reduction. It proposes to do this over the 10-year strategic period by expanding the original key sectors embraced (Agriculture, Tourism, Health, Civil Society and Education) to include Finance/Economic Development and Physical and Environmental Planning. Additionally it places increased focus on integrating disaster risk reduction and climate change considerations and their impact on vulnerable groups.

Genesis and Evolution of the CDM in the Caribbean Region

In recognising the critical link between disaster management and sustainable development, the Caribbean Disaster Emergency Response Agency (CDERA), now the Caribbean Disaster Emergency Management Agency (CDEMA), spearheaded the adoption of a strategic CDM framework in 2001 in collaboration with stakeholders. The strategic objective of CDM is the integration of disaster management considerations into the development planning and decision-making process of CDEMA’s Participating States (PSs).

In 2007, the CDEMA Coordinating Unit (CU), with the support of and in collaboration with its partners, completed a revised and Enhanced Regional Strategy and Results Framework to guide CDM programming in the Caribbean for the period 2007 - 2012 in the first instance. This Strategy was established within the context of the 2005 - 2015 CARICOM Regional Framework and developed inline with Results-Based Management (RBM) principles and approaches. The Enhanced CDM Strategy was baseline in 2010 and reviewed in 2012, the findings of which were used as the basis for developing the 2014 - 2024 CDM Strategy presented in this report.

Defining the 2014 - 2024 CDM Strategy and Results Framework

The 2014 - 2024 Framework was informed by findings from a review of the progress made on the CDM Strategy 2007 - 2012 and utilising broad-based stakeholder consultations, which lasted over one year. These processes yielded valuable data and a set of emerging priorities on which the framing of the strategic plan going forward was based.

The regional goal of the draft CDM Strategy and Results Framework 2014 - 2024 (hereafter referred to as the CDM Strategy 2014 - 2024) is to realise “Safer, more resilient and sustainable CDEMA Participating States through Comprehensive Disaster Management”. This regional goal is supported by 16 regional outcomes in four priority areas as represented in the CDM Logic Model.
The strategic framework also embodies seven (7) elements, which when realised will lead to the desired future state of Participating States. These are:

i. National, regional and sectoral institutions with adequate/minimum standards of capacity to deliver the CDM programme
ii. Knowledge management which is applied for fact-based decision-making
iii. Disaster resilience which is enhanced within key sectors of the economy
iv. Operational readiness at regional, national, sectoral and local levels
v. A clearly established and understood nexus between CCA and DRR with programming and governance harmonised
vi. Community resilience which has been enhanced for the most vulnerable with gender concerns addressed at all stages and levels
vii. Resource allocation which underpins the ability to deliver the strategy

Implementation Context
Implementation of the CDM Strategy going forward will see the maintenance of cross-cutting themes featured in the previous strategic period with the inclusion of a new one. These are:

a. Gender
b. Climate Change
c. Information and Communications Technology
d. Environmental Sustainability**

Implementation of CDM in the region is increasingly maturing and is being endorsed and bought into by many stakeholders and partners at all levels across the region. This has allowed for the formulation of a very inclusive governance mechanism which provides support, oversight and guidance to CDEMA in managing the process. The CDM Governance Mechanism that is evolving is an innovative and pioneering, inter-institutional partnership that allows for cooperation, coordination and participation in the mainstreaming of disaster risk reduction at all levels across the region. The CDM Governance Mechanism will also be instrumental in ensuring that CDM is mainstreamed at all levels in the region. The CDM Strategy 2014 - 2024 will continue to further integrate existing participating sectors whilst providing the environment for emerging sectors to come onboard through the articulation of sector policies, plans and programmes. It is anticipated that finance and economic development, and physical and environmental planning sectors will be sufficiently engaged to adopt CDM during this strategic period.

The Results Framework for the Comprehensive Disaster Management Strategy 2014 - 2024
Local, national and regional needs have been identified and documented through a highly consultative and participatory process of review and assessment, which led to the reformulation of the results framework for this strategy. The CDM Expert Group and over 50 national and regional level organisations were involved in the determination of priorities and the results to be delivered over the upcoming 10-year period. The results framework builds on the strengths of the former strategy and strategically aligns an integrated risk management approach with climate change considerations, the need for greater penetration of CDM within sectors and local communities, the continued focus on gender and a greater emphasis on the needs of vulnerable groups. The cross-cutting themes of climate change, gender, information and communications technology and environmental sustainability underpin all of the actions and results to be delivered.

The global final outcomes detailed in Figure 1 below represent the vision of a safer, more resilient Caribbean through Comprehensive Disaster Management and will provide the focus for the collective effort of many stakeholders who will remain engaged throughout the strategy’s term.

Monitoring and Evaluation
To monitor and measure progress over the strategic period, a performance monitoring and evaluation framework has been designed to ensure that the region will have access to the required tools and be assured of timely reviews to reflect on progress being made, challenges being encountered and corrective actions required to ensure that the future desired state is realised within the agreed upon timeframes. The M&E system for the CDM Strategy will be online to facilitate wide stakeholder data input, analysis, reporting and information dissemination.

Conclusion
Ultimately, the Comprehensive Disaster Management Strategy 2014 - 2024 differs as it will expand the stakeholder base with the inclusion of the emerging priority of Physical and Environmental Planning and Finance and Economic Development sectors. It is strongly centred on actions which enhance public-private partnerships and which must be treated within all the sector groupings. It focuses on a more strategically aligned and integrated risk management approach, where climate change considerations are positioned as a vehicle for implementation of this agenda and it finally enhances results-oriented programming whilst elaborating a Performance Measurement Framework, online database and Implementation Plan.
Figure 1: Results Framework for the Comprehensive Disaster Management Strategy 2014 - 2024 with Cross-Cutting Themes

**Regional Goal**
Safer, more resilient and sustainable CDEMA Participating States through Comprehensive Disaster Management

**CDM Priority Areas**

1. **Priority Area 1 (PA 1)**
   Strengthened institutional arrangements for CDM

2. **Priority Area 2 (PA 2)**
   Increased and sustained knowledge management and learning for CDM

3. **Priority Area 3 (PA 3)**
   Improved integration of CDM at sectoral levels

4. **Priority Area 4 (PA 4)**
   Strengthened and sustained community resilience

**Regional Outcomes**

- **Regional Outcome 1.1 (RO1.1)**
  National Disaster Organisations and CDEMA CU are strengthened for effective support of the implementation, monitoring and evaluation of CDM in Participating States

- **Regional Outcome 1.2 (RO1.2)**
  CDM is integrated into policies, strategies and legislation by Participating States

- **Regional Outcome 1.3 (RO1.3)**
  Development Partners’ programming aligned to CDM programming and priorities

- **Regional Outcome 1.4 (RO1.4)**
  Strengthened coordination for preparedness, response and recovery at the national and regional levels

- **Regional Outcome 1.5 (RO1.5)**
  CDM programming is adequately resourced

- **Regional Outcome 2.1 (RO2.1)**
  Regional Disaster Risk Management Network for informed decision-making at all levels improved

- **Regional Outcome 2.2 (RO2.2)**
  Integrated systems for fact-based policy and decision making established

- **Regional Outcome 2.3 (RO2.3)**
  Incorporation of community and sectoral based knowledge into risk assessment improved

- **Regional Outcome 2.4 (RO2.4)**
  Educational and training materials for CDM standardised, improved and applied in the region

- **Regional Outcome 3.1 (RO3.1)**
  Strategic Disaster Risk Management programming for priority sectors improved

- **Regional Outcome 3.2 (RO3.2)**
  Hazard information integrated into development planning and work programming for priority sectors

- **Regional Outcome 3.3 (RO3.3)**
  Incentive programmes developed and applied for the promotion of the risk reduction/CCA in infrastructure investment in priority sectors

- **Regional Outcome 4.1 (RO4.1)**
  Standards for safe communities developed, agreed and applied

- **Regional Outcome 4.2 (RO4.2)**
  Community-based Disaster Management capacity built/strengthened for vulnerable groups

- **Regional Outcome 4.3 (RO4.3)**
  Community Early Warning Systems, integrated, improved and expanded

- **Regional Outcome 4.4 (RO4.4)**
  Community Livelihoods safeguarded and strengthened through effective risk management

**Cross-Cutting Themes**

- **Gender**
- **Climate Change**
- **Information & Communications Technology**
- **Environmental Sustainability**
Regular annual disaster losses are estimated at **US$3 billion** with significant loss to social and productive sectors.
THE CARIBBEAN HAZARD LANDSCAPE

The region has experienced repeated losses from hurricanes and associated wind, rain and storm surge damage. The Caribbean is the second most hazard-prone region in the world.

The vulnerability of the Caribbean region to a diverse set of hazards is well documented. Most of the countries are within the recognised hurricane belt and there is seismic activity throughout the Caribbean with frequent events being recorded. A number of islands are mostly the tops of volcanoes, which are situated along major transportation and trans-shipment routes exposing them to migratory vector borne diseases and are increasingly becoming industrialised, heightening the possibility and potential for major accidents.

Within recent decades the region has experienced repeated losses from hurricanes and associated wind, rain and storm surge damage. The Caribbean is the second most hazard-prone region in the world. Regular annual disaster losses are estimated at US$3 billion with significant loss to social and productive sectors. Volcanic eruption destroyed the economy and social life in Montserrat. Flooding and landslides have repeatedly occurred in several territories and continue to damage physical infrastructure. Droughts have reduced agricultural output and water supply. Impacts from hazards will only intensify as a result of climate change, as 60% of the region’s population and 70% of economic activity are within two miles of coastlines.

This landscape precipitated the need for the development of multi-hazard contingency and coordinated response plans as a means to mitigating and lessening the potential impacts from these hazards.
CDM involves **RISK REDUCTION & MANAGEMENT AND INTEGRATION OF VULNERABILITY ASSESSMENT** INTO THE DEVELOPMENT PLANNING PROCESS.
After 12 years of embracing CDM in the region, the need still exists to ensure that the region remains steadfast on its course towards reducing loss of lives and property whilst continuing to reflect the principles and requirements of related regional and international platforms, policies and strategies.

In 2001, the Caribbean Disaster Emergency Management Agency (CDEMA), then called the Caribbean Disaster Emergency Response Agency (CDERA), recognising the critical link between disasters and sustainable development, spearheaded the development and adoption of a strategic framework for Comprehensive Disaster Management (CDM). The development of the strategy was supported by the United Nations Development Programme (UNDP) and the United States Agency for International Development (USAID). The strategic objective of CDM is the integration of disaster management considerations into the development planning and decision-making process of CDEMA’s Participating States (PS).

After over five years (2001 - 2006) of CDM operations in the region, CDEMA updated and revised the CDM strategy producing an enhanced CDM strategy to guide Disaster Risk Management (DRM) programming in the Caribbean for the 2007 - 2012 period. The review was conducted within a Results Based Management (RBM) framework which identified four priority outcomes to inform programming support over five years. The baseline for the CDM Strategy 2007 - 2012 was established in 2010 through the development and finalisation of the MER framework for the CDM Strategy.

The review of the CDM Strategy 2007 - 2012 indicated that after 12 years of embracing CDM in the region, the need still exists to ensure that the region remains steadfast on its course towards reducing loss of lives and property whilst continuing to reflect the principles and requirements of related regional and international platforms, policies and strategies. Moving forward, CDM must become the status quo approach and practice for saving lives and property in the region.
AN AGREED **CONSENSUS** APPROACH TO ACHIEVING DISASTER RISK REDUCTION IN THE REGION.
PURPOSE OF THE CDM STRATEGY 2014 - 2024

This iteration of the CDM Strategy is designed to continue the process of embedding and institutionalising CDM as the Caribbean’s platform for achieving risk reduction.

The timeframe associated with this strategic period has been extended to 10 years to make provision for a phased approach to implementing activities by national stakeholders with differing capacities and capabilities.

This strategic programming framework was not intended to replace or supersede any existing programming frameworks or policy instruments but embrace and integrate relevant initiatives underway, whilst identifying gaps which needed addressing. Successive enhancements of the CDM Strategy have built on this principle and now represent an agreed consensus approach to achieving disaster risk reduction in the region.
THE STRATEGIC FRAMEWORK ALSO FURTHER ENTRENCHES THE PRINCIPLES OF MUTUALLY SUPPORTING OUTCOMES AND OUTPUTS TO ACHIEVE THE DESIRED IMPACT.
GUIDING PRINCIPLES FOR DEFINING THE CDM STRATEGY 2014 - 2024

The collective knowledge and experience of the CDM stakeholders including from the regional, national and community levels have also significantly factored into the development of a strategy which is relevant, practical and achievable.

The current cycle of revision has maintained all the tried and tested processes utilised in developing and maintaining previous iterations of the CDM Strategy. These include:

**The Guiding Principles:**

**Inclusiveness and Consultation**
All relevant stakeholders were included and participated in either formal assessments, interviews and focus groups meetings.

**Building on Conditions Precedent**
The status of implementation of previous CDM frameworks has been established through assessments, audits and reports. The current framework has taken cognizance of these findings and lessons learnt, incorporated current expressed priorities and key thematic areas for consideration to inform the 2014 - 2024 strategy and desired state.

**Applied Knowledge**
The current review exercise has benefited from the collective knowledge and expertise of a specialist team of practitioners who have over 20 years’ core experience in Caribbean Disaster Management matters generally and specifically on the CDM Strategy from inception to present. The team’s detailed working knowledge of monitoring, evaluation and reporting (MER) theories coupled with its expertise on performance measurement and development of performance indicators, have been applied to this exercise.

The collective knowledge and experience of the CDM stakeholders including from the regional, national and community levels have also significantly factored into the development of a strategy which is relevant, practical and achievable.

**Programme-Based Approach (PBA)/Results Based Management (RBM)**
The revision and process utilised in developing the new strategic framework continues to benefit from the application of PBA and RBM principles. This involved the engagement of development partners and other stakeholders to coordinate programme support and a focus on results rather than on individual activities. The strategic framework also further entrenches the principles of mutually supporting priority areas and outcomes to achieve the desired regional goal and impact.
The CDM Strategy builds on the successes and addresses the priority challenges ahead for improved disaster risk reduction at all levels by:

- Expanding the stakeholder base with the inclusion of the emerging priority sectors - Physical and Environmental Planning and Finance and Economic Development.
- Strengthening public/private partnerships within all the sector groupings going forward.
- Enhancing results-oriented programming, monitoring and evaluation through the elaboration of an Implementation Plan, Performance Measurement Framework and a supporting online information system for reporting on results.
- Focusing on a more strategically aligned and integrated risk management approach, where climate change considerations are integrated into priority sectors allowing for the application of appropriate interventions.

In particular, the development of the Implementation Plan will be a new feature since the first CDM Strategy was developed over a decade ago. The Implementation Plan will not only guide interventions in the region at the national, regional and sectoral levels, but will be the foundation for guiding investment in an improved Monitoring and Evaluation System.
There is now international acknowledgement that efforts to reduce disaster risks must be systematically integrated into policies, plans and programmes.
There is now international acknowledgement that efforts to reduce disaster risks must be systematically integrated into policies, plans and programmes for sustainable development and poverty reduction.

The Caribbean region is a microcosm of a larger global geo-political and inter-connected environmental landscape where its member countries are signatories to numerous international and UN-based conventions, treaties and platforms. In its pursuit of sustainable development and poverty reduction, the Caribbean region has articulated a regional framework of action 2005 - 2015 (Caribbean Community, 2005) and individual national strategies and Plans of Actions (POAs) aligned to the regional strategy that seek to fulfil the obligations of the international agendas ratified. There is now international acknowledgement that efforts to reduce disaster risks must be systematically integrated into policies, plans and programmes for sustainable development and poverty reduction.

The importance of promoting disaster risk reduction efforts on the international and regional levels as well as the national and local levels has now truly been clearly accepted and recognised over the past few years as demonstrated in the number of key multilateral frameworks and declarations that have been implemented or are now in operations. This section highlights the key frameworks that the CDM Strategy has historically been aligned to, and continues to support over the period 2014 - 2024.

A foundational plank and core element of the international agenda on disaster risk reduction is the Hyogo Framework for Action (HFA) which was the main outcome of the 2004 World Conference on Disaster Reduction held in Yokohama, Japan. The objectives and expected outcomes articulated then are still very relevant today and are used as benchmarks against which various regions around the world have pegged their own indigenous disaster risk management frameworks.
The current Hyogo Framework will expire in 2015 culminating with a series of regional reports rolled up to inform a report from the UN Secretary-General at the 2015 World Conference on Disaster Risk Reduction and Resilience. The Americas’ report which was produced from a series of regional consultative processes such as the Regional Platforms for Disaster Risk Reduction and the Ministerial Conferences on Disaster Risk Reduction has already identified recommendations for consideration at the international level. These include:

- A post-2015 framework for disaster risk reduction should consider lessons learned in areas of public policy, disaster risk reduction financing and territorial development.

This framework should strengthen programmes concerned with education, scientific research and technological development at all levels and among all sectors. It should also incorporate traditional and local knowledge into risk reduction and disaster resilience practices.

It should encourage private sector involvement; link academics, science and technology to social demands for sustainability and disaster risk reduction; and recognise the role of women and children in resilience building.

HFA2 should be aligned with different global mechanisms for sustainable development (MDGs and post-2015 development agenda, UNFCCC and its main decisions related to adaptation to climate change, Rio+20 Declarations).

Integrate disaster risk reduction into sectors particularly those that emphasise disaster risk reduction in both private and public investment projects (finance).

Strengthen local government decentralisation processes by improving regulations, creating mechanisms for resource use, and providing monitoring and accountability instruments to guarantee law enforcement.

Provide better coordination between the government and civil society (concerning both their rights and corresponding responsibilities) at all decision-making levels, and implement public policies that reinforce spreading financial resources to the local level.

The CDM Strategy 2014 – 2024 has considered these recommendations and has incorporated where appropriate, outcomes and outputs which will lead to the achievement of the future desired state.
6.3. Millennium Development Goals

The 2013 Report on the Millennium Development Goals (MDGs) notes that significant and substantial progress has been made in meeting many of the targets and has been the most successful global anti-poverty push in history. As the 2015 target for achieving targets approaches, the report further notes that the achievements have been uneven among and within countries. It calls for continued efforts to build a more just, secure and sustainable future for all. The CDM Strategy and associated MER/PMF will continue to serve as a platform in the region for the further advancement of the MDGs and for measuring and reporting on progress.

6.4. Rio+20

The Caribbean DRM agenda and the vision of the Rio+20 principles are inextricably linked as is demonstrated in the shared aim of eradicating poverty and achieving sustainable development. In this regard, the 2014 - 2024 strategic period will have major focus on and earnestly consider issues related to vulnerable groups, livelihoods, gender and climate change as key pillars of the framework going forward.

Focus on other principles of the Rio+20 agenda such as integration, stakeholder engagement, strengthening of institutional frameworks and the strengthening of inter-governmental arrangements continues to be embraced in the revised CDM strategic framework.
CDM AND REGIONAL DEVELOPMENT AGENDAS

A community where every citizen is secure and has the opportunity to realise his or her potential with guaranteed human rights and social justice; and can contribute to and share in, its economic, social and cultural prosperity.

The CARICOM Regional Framework has now been in operation for over eight years. This framework was closely aligned to the CDM Strategy from its inception as it sought to advance the implementation of the articulated outcomes and outputs (Intermediate Results). As the implementation period draws to a close, the founding pillars and principles on which it was constructed will continue to inform the current CDM Strategy and others in the future.

The priority thematic areas which the CARICOM regional framework and the CDM Strategy 2014-2024 collectively seek to promote include hazard mapping and vulnerability assessments (HVA), Community Based Disaster Management, early warning systems, climate change, vulnerable populations and knowledge management.

7.2. CARICOM Strategic Framework 2015 - 2019

CARICOM has had significant achievements over the past four decades, for example in the areas of education, health, disaster management and trade. Regional initiatives have borne fruit in member states and have become part of the human development landscape such as the CSME, CXC, the HIV/AIDS response, the regional disaster management strategy, the regional energy policy (more recently) and many others. These advancements, coupled with the many and varied strengths of the people of the Region, and the rich natural resource base, are the spring board for advancing the region over the next five years and beyond (CARICOM, 2014).

The proposed vision for the CARICOM Strategic Framework 2015 - 2019 is “A Caribbean community that is integrated, inclusive and resilient; driven by knowledge, excellence, innovation and productivity. A community where every citizen is secure and has the opportunity to realise his or her potential with guaranteed human rights and social justice; and can contribute to and share in, its economic, social and cultural prosperity. A community which is a competitive and unified force in the global arena”. (CARICOM, 2014)
This vision is to be achieved through the following proposed ultimate outcomes: (i) Strong Economic Growth and Reduction in Poverty and Unemployment, (ii) Improved Quality of Life, (iii) Reduced Environmental Vulnerability and (iv) An Integrated Community with Equity for All.

Core Value #7 of the CARICOM Strategic Framework 2015 - 2019: Environmental Protection states “we are committed to good environmental management and the protection of the region's natural assets across all sectors of development; and empowering the peoples of the community in their preparation for and management of the impacts of natural and man-made hazards and the effects of climate change”.

The integral role that CDM plays in advancing the upcoming CARICOM Strategic Framework 2015 - 2019 is clearly underscored in the vision, outcome and core value statements. Given the overlap between these two regional strategic frameworks, it is clear that achieving the CDM Strategy impact and outcomes will support the Caribbean community in achieving its long term vision for post 2019.

7.3. The CARICOM Single Market and Economy (CSME)

The CARICOM Single Market and Economy (CSME) is intended to benefit the people of the Caribbean region by providing more and better opportunities to produce and sell our goods and services and to attract investments through the creation of one large market among the CARICOM member states.

The history of the CSME can be traced back to 1968, with the establishment of the Caribbean Free Trade Area (CARIFTA) which served the limited purpose of removing tariffs and other barriers to intra-regional trade in goods. By 2002, the Revised Treaty of Chaguaramas had prescribed the removal of existing barriers and to establish a single market space in which not only goods, but services, capital, technology, and skilled persons should freely circulate, where Caribbean citizens would enjoy new and unfettered rights of establishment of enterprise anywhere in their region.

There are 15 CARICOM Member States, 13 of which are currently actively participating in the CARICOM Single Market & Economy. These 13 states - Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, Saint Lucia, St. Kitts and Nevis, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago - are all member states of CDEMA.

The main objectives of the CSME are (i) full use of labour (full employment) and full exploitation of the other factors of production (natural resources and capital); and (ii) competitive production leading to greater variety and quantity of products and services to trade with other countries. It is expected that these objectives will in turn provide improved standards of living and work and sustained economic development.

The CDM agenda is of particular relevance to several elements of CSME as development, economic policy
and trading measures within individual countries and within the region as a whole will be greatly stymied by the hazard events.

7.4. Organisation of Eastern Caribbean States (OECS) – St. George’s Declaration of Principles for Environmental Sustainability

The aim of the revised 2006 St. George’s Declaration of the OECS is to: “Foster Equitable and Sustainable Improvement in the Quality of Life in the OECS Region”. This aim is supported by the articulation of 21 principles which span a range of critical issues important to the sub-region.

Principle #9 in particular speaks to Integrated Disaster Management whereby “governments will integrate disaster management initiatives with environmental priorities to help the peoples of the region in their preparation for and management of the impacts of natural and man-made disasters.” The revised CDM Strategy will continue to be harmonised with the St. George’s Declaration in support of the OECS’ covenant to sustainable development in the region.

The Caribbean Community Climate Change Centre articulated a regional framework in 2007 to cover the period 2009 - 2015 with a strategic vision of “regional society and economy that is resilient to a changing climate.” The vision is supported by four key strategies related to:

1. Promoting actions to reduce greenhouse gas emissions through energy reduction and conservation, and switching to renewable and cleaner sources of energy;
2. Promoting actions to minimise the effects of greenhouse gas emissions through initiatives and measures designed to reduce the vulnerability of natural and human systems to the effects of climate change (e.g., flood defences, and changing land use patterns);
3. Promoting the development and implementation of educational and public awareness programmes as well as public access to information and citizen participation across the Caribbean region; and
4. Building the Caribbean Community Climate Change Centre’s (CCCCC) organisational capacity to manage adaptation to climate change, through training of scientific, technical, and managerial personnel; institutional strengthening; providing systematic long-term technical assistance; and strengthening information support capacity that allows the CCCCC to effectively support the member states.

A fifth strategy seeks to:

5. Promote the dissemination of successful adaptation experiences to address the impacts of climate change on: (a) water supply; (b) coastal and marine ecosystems; (c) tourism; (d) coastal infrastructure; and (e) health.

The revised CDM Strategy acknowledges the CCCCC’s regional framework as an important companion protocol and has reflected climate change as a cross-cutting theme which must be treated throughout all stages and phases of implementation. It is also recognised as one of the contributing elements to achieve the desired future state.
THE CDM STRATEGY IS INDEED A **SIGNIFICANT LANDMARK** WHICH HAS NOW SET THE PLATFORM FOR CONTINUED DISASTER RISK REDUCTION INITIATIVES IN THE CARIBBEAN.
The performance monitoring framework and indicator questions for the CDM Strategy developed in 2010 was transformed into an online Survey Monkey® tool resulting in a questionnaire with over 460 questions.

The performance monitoring framework and indicator questions for the CDM Strategy developed in 2010 was transformed into an online Survey Monkey® tool resulting in a questionnaire with over 460 questions. The survey was administered using a variety of modalities including telephone interviews and facilitated group sessions. The data ensuing was utilised to assess the achievements and gaps in implementing the CDM Strategy 2007 - 2012. The assessment was also useful in identifying emerging priorities for consideration in the next strategic period, 2014 - 2024.

The assessment indicated that the enhanced CDM Strategy is indeed a significant landmark which has now set the platform for continued disaster risk reduction initiatives in the Caribbean. The noteworthy summary findings and recommendations are:

i. The enabling environment (through the presence of model CDM legislation, policies and strategies) at the national level has been selectively advanced in some countries and remains an area of priority for others. Moreover, the degree to which sectors have an enabling environment which increasingly integrate DM, climate and gender considerations was greater than the former strategic period. This will serve as a platform for a more holistic approach for the development and involvement of sectors in CDM. There was an uneven improvement in terms of the use and adoption of model tools for CDM implementation and especially, a greater emphasis to be placed on monitoring, evaluation and reporting at various levels.
ii. The disaster management landscape in the Caribbean region has evolved from the provision of unique and dynamic systems necessary to facilitate effective delivery of CDM services to respective countries. In a broader context, information about disaster preparedness in case of an emergency, disaster management plans, policies and guidelines have been in existence and accessible for many years. However, communities have been severely affected by disasters due to lack of adequate coping capacity. This may be attributed to limited access to resources to address risk exposure. In order to enhance the information sharing and management of the knowledge generated from various sources, it is highly essential to closely network the organisations/institutions and moreover, people working at the community level to increase resilience. The network of institutions will create a common platform and enable its stakeholders and people to capture, organise, share and reuse the knowledge generated in the area of disaster management. Greater access to knowledge management systems at the regional level is required. National and sectoral partners must continue where relevant, to develop ICT platforms and enhance the degree of interoperability of ICT platforms within and across the region. Clarity on the role and contributions of Centre of Excellence (COE) is essential and ultimately, a greater penetration of learning and knowledge management systems at the community levels must increase.

iii. There was an overall high positive change in mainstreaming efforts over the period. However, there is still need for a continued focus on the integration of work plans and the provision of resources for CDM implementation at sector level. Moreover, the congruence of National Sustainable Development Plans or Strategies with sector plans and CDM policies must continue to be supported and aligned. Evidence of the integration of gender into national and sector plans must be increased and the presence and adoption of Emergency Response Plans and Business Continuity Plans must be fostered at the sector level.

iv. DRM is a multi-sectoral and multi-stakeholder endeavour requiring that all involved work towards the same objectives. Key to the success of a national government’s ability to effectively improve delivery on DRM programmes is the level to which all relevant departments understand concepts and aim to achieve similar goals. The success of DRM is predicated on the ownership by governments for their risk reduction agenda and the initiation of larger strategic partnerships and disaster risk reduction platforms. Participating states must advance the mainstreaming of DRM into national policies, planning processes and decision-making at all levels and across key sectors.

v. Over the implementation periods, participating states have: examined the community resilience framework; improved on the framework which would have led to a greater role for schools, youth and families in the overall process leading to greater resilience; built partnerships and multi-disciplinary perspective in approaching Disaster Risk Reduction measures at the community level; recognised the importance of readiness, providing public education and enhanced their response during periods of crisis; developed recovery programmes that focus on physical and social factors; set evidence-based guidelines for practice and established an interface between research and practice.

vi. Whilst community resilience measures were addressed over the period, a few countries considered their community resilience to be low. On a more positive note, a few indicated that level of participation of local communities in DRM initiatives was minimally adequate or better. The number of communities with disaster management programmes has increased over the period. Increasingly, communities are employing the HVA process to develop their plans and there is still a need for increased community participation in exercises; a greater access of communities to DM products (hazard maps, etc.) and a greater penetration of EWS at the community level which must continue to be fostered.

8.2. Sector Analysis – Areas of Convergence

The CDM Sector Sub-Committees have established shared priorities, which have informed the upcoming strategic period (CDEMA, 2009; CDEMA, 2012). National priorities, as articulated in Country and Sector Work Programmes have further refined the view of the critical areas which will provide the focus for the 10-year strategic period. Areas of convergence of sector work are:

i. Developing training materials for sector actors where education and training programmes need to be further developed and implemented for these sector actors. Training and education
efforts should address the fundamentals of DRR within a multi-hazard environment. Additionally, the quality of CBDM training materials should be enhanced.

ii. Building local/community level capacities for CDM where local capacity for sector specific disaster mitigation, preparedness and response is improved, community mobilisation increased with a *concomitant increase of resources for communities at risk and individual/family preparedness is promoted.

iii. Building sector level capacities for CDM where SSC are strengthened, resources, particularly funding, mobilised, institutional capacities enhanced within the sector, sector DRM strategies are developed, hazard information incorporated into sector planning and development, emergency plans are either developed or enhanced within the sector, recovery/reconstruction is enhanced and key sector actors are sensitised about DRM.

iv. Improving information sharing where management systems and services (inventories, directories etc.) are developed for sectors and levels of information sharing are increased within sectors.

v. Enhancing collaboration and dialogue (among actors across sectors and at different levels) where coordination among sectors is enhanced, synergies identified and partnerships established where appropriate and dialogue and cooperation within and across sectors is promoted and improved.

vi. Performing various types of assessments (including risk, vulnerability, needs and capacities) where capacity for disaster damage assessment is enhanced, there are improved methods for predictive multi-risk assessments and socio-economic analysis of risk reduction actions, capacity for developing and applying methodologies, studies and models is strengthened and sectoral needs and vulnerability assessments completed at the national level.

vii. Enhancing public awareness efforts where communities have increased knowledge/awareness of hazards, their level of risk and risk reduction approaches, particularly “at risk” communities, communities are aware of and trained to use EWS, promoting the integration of DRR into the regional school curricula is encouraged along with the use of informal and formal modes to educate youth about DRM, the public is aware of the importance of DRM to a specific sector and gender-specific impacts of disasters.

viii. Standardising CDM tools and approaches where vulnerability assessment methodologies are consolidated and improved with risk management protocols developed for the sector.

8.3. Broad-Based Stakeholder Consultation

At its core, the CDM Strategy 2014 - 2024 reflects the values and principles of stakeholder participation in the definition of the goals, objectives and the short-term results to be delivered over the 10-year period.

An initial stakeholder consultative meeting took place in June 2013 in Barbados where the revised Logic Model was considered and refined. The outputs of that workshop were used to update the results framework and strategic objectives. A desired future state for participating states, regional and international partners was also confirmed.

A subsequent meeting took place in October 2013 in Barbados with wide sectoral and national representation, inclusive of the emerging sectors. The Logic Model was further refined and the Performance Monitoring Framework and Implementation Plan were drafted. A full Annex I – List of Representatives and Organisations Consulted appears on page 57.

Broad stakeholder participation in the formulation of the Strategy, the Performance Monitoring Framework and Implementation Plan are the hallmarks that have laid the foundation for the 2014 - 2024 period and will underpin the continued success and advancement of Comprehensive Disaster Management throughout the Caribbean region.
THE ELEMENTS OF THE FUTURE DESIRED STATE FORM THE BASIS OF THE PLAN’S PURPOSE AND OBJECTIVES OF THE STRATEGY.
The future desired state

A key output of the assessments and stakeholder consultations was the agreement on seven elements (Figure 2), which comprise the future desired state for CDEMA participating states. The elements of the future desired state form the basis of the Plan’s purpose.

**Figure 2:** Elements of the Future Desired State for CDEMA PS for the strategic period of 2014 - 2024

- National, regional and sectoral institutions with adequate/minimum standards of capacity to deliver the CDM programme
- Knowledge management which is applied for fact-based decision-making
- Disaster resilience which is enhanced within key sectors of the economy
- Operational readiness at regional, national, sectoral and local levels
- Harmonised governance of CCA and DRR programming
- Community resilience which has been enhanced for the most vulnerable with gender concerns addressed at all stages and levels
- Resource allocation which underpins the ability to deliver the strategy
THE LOGIC MODEL COMPRIS

FOUR GLOBAL FINAL

OUTCOMES WHICH WERE

PARTIALLY OR FULLY REVISED...TO

REPRESENT NEW PERSPECTIVES

AND FOCUS FOR THE UPCOMING

STRATEGIC PERIOD.
THE CDM STRATEGY 2014 – 2024: LOGIC MODEL

The Logic Model reflects the stated desire of community-level, national, regional and development partners. The Logic Model comprises four priority areas which were partially or fully revised (from the previous CDM Strategy 2007 - 2012) to represent new perspectives and focus for the upcoming strategic period. The outcome statements still address the overarching principles of CDM in that they are meant to address all phases of DM by sectors, within the context of the cross-cutting themes.

Figure 3 illustrates the Logic Model in its entirety with all of the directly and indirectly associated regional outcomes and priority areas. Figure 4 illustrates the Logic Model inclusive of the purpose statements and cross-cutting themes.
Figure 3: Logic Model for the Comprehensive Disaster Management Strategy 2014 - 2024 displaying the interrelationships between various outcomes results and priority areas.
Figure 4: Logic Model for the CDM Strategy outlining the Plan’s purpose and cross-cutting themes.

**Regional Goal:** Safer, more resilient and sustainable CDEMA Participating States through Comprehensive Disaster Management

**CDM Priority Areas**

1. **Priority Area 1 (PA 1):** Strengthened institutional arrangements for CDM
2. **Priority Area 2 (PA 2):** Increased and sustained knowledge management and learning for CDM
3. **Priority Area 3 (PA 3):** Improved integration of CDM at sectoral levels
4. **Priority Area 4 (PA 4):** Strengthened and sustained community resilience

**Regional Outcomes**

- **Regional Outcome 1.1 (RO1.1):** National Disaster Organisations and CDEMA CU are strengthened for effective support of the implementation, monitoring and evaluation of CDM in Participating States
- **Regional Outcome 1.2 (RO1.2):** CDM is integrated into policies, strategies and legislation by Participating States
- **Regional Outcome 1.3 (RO1.3):** Development Partners’ programming aligned to CDM programming and priorities
- **Regional Outcome 1.4 (RO1.4):** Strengthened coordination for preparedness, response and recovery at the national and regional levels
- **Regional Outcome 1.5 (RO1.5):** CDM programming is adequately resourced
- **Regional Outcome 2.1 (RO2.1):** Regional Disaster Risk Management Network for informed decision-making at all levels improved
- **Regional Outcome 2.2 (RO2.2):** Integrated systems for fact-based policy and decision making established
- **Regional Outcome 2.3 (RO2.3):** Incorporation of community and sectoral based knowledge into risk assessment improved
- **Regional Outcome 2.4 (RO2.4):** Educational and training materials for CDM standardised, improved and applied in the region
- **Regional Outcome 3.1 (RO3.1):** Strategic Disaster Risk Management programming for priority sectors improved
- **Regional Outcome 3.2 (RO3.2):** Hazard information integrated into development planning and work programming for priority sectors
- **Regional Outcome 3.3 (RO3.3):** Incentive programmes developed and applied for the promotion of the risk reduction/CCA in infrastructure investment in priority sectors
- **Regional Outcome 4.1 (RO4.1):** Standards for safe communities developed, agreed and applied
- **Regional Outcome 4.2 (RO4.2):** Community-based Disaster Management capacity built/strengthened for vulnerable groups
- **Regional Outcome 4.3 (RO4.3):** Community Early Warning Systems, integrated, improved and expanded
- **Regional Outcome 4.4 (RO4.4):** Community Livelihoods safeguarded and strengthened through effective risk management

**Cross-Cutting Themes**

- Gender
- Climate Change
- Information & Communications Technology
- Environmental Sustainability
SAFER, MORE RESILIENT AND SUSTAINABLE CDEMA PARTICIPATING STATES THROUGH COMPREHENSIVE DISASTER MANAGEMENT.
THE LONG TERM GOAL OF THE CDM STRATEGY: THE IMPACT STATEMENT

The impact statement reflects the growing understanding that participating states must define what acceptable levels of risk may be within their context, define approaches and mechanisms that will enhance their capacity to endure and increase their ability to resist, absorb, accommodate to and recover from the effects of a hazard impact, in a timely and efficient manner.

The impact statement galvanises attention and action around the need for continued focus on Comprehensive Disaster Management for CDEMA participating states during the upcoming period of 2014 - 2024. Five critical factors are encapsulated and reflected in the statement, either explicitly or implicitly, which are:

1. The need to ensure that lives and livelihoods are saved;
2. The need to ensure that property and assets are safeguarded;
3. The concept of resilience being paramount in an understanding of the guiding principles directing action at all levels;
4. The critical link between Disaster Risk Reduction and its integration into the National Sustainable Development agenda be forged and understood; and
5. The need to focus on vulnerable groups and overarching issues related to vulnerability within communities and stakeholders.

The impact statement accounts for the fact that a safer and more resilient society promotes sustained economic development. Comprehensive Disaster Management within the region assists in the attainment of the principles of various multilateral agreements, such as the Millennium Development Goals and the Hyogo Framework for Action, amongst several and the national development agenda of participating states.

**Figure 5:** Prevailing factors informing the impact statement for the CDM Strategy 2014 - 2024
11.1. **Building Safer and Resilient States – Unifying Theme for the Strategic Period 2014 - 2024**

Building on the concerns outlined along the Impact Statement for the Strategy, synergy may be derived from the adaptation of the UNISDR’s “Safer Cities” Campaign and the use of the CDM Strategy’s goal of “Safer, more resilient CDEMA Participating States through Comprehensive Disaster Management”. A greater emphasis on resiliency and community level actions is sought over the new strategic period. The stated emphasis sought during the upcoming period is addressed in the statement of purpose of the strategy, which is:

“To strengthen regional, national and community level capacity for mitigation, management, and coordinated response to natural and technological hazards, and the effects of climate change”.

A unifying theme under the strategy for the upcoming period is partly based and inspired on the “Safer Cities” campaign. In this context, the ‘Resilient Caribbean States’ unifying theme and campaign would provide a simple yet powerful and effective measure built on the DM phases (Figure 6):

The “Resilient Caribbean States” unifying theme and campaign can galvanise interest and provide a focus that may permeate to the community and local levels. Similar to the UNISDR’s campaign, it can provide a single unifying theme which may direct public awareness efforts and bring into focus the need to address areas of deficiency in terms of results in the current version of the strategy. Relevant principles and best practices derived from the international campaign can be adapted at the national level.
Regional CDM Strategy and Results Framework 2014 - 2024

SAFER, MORE RESILIENT AND SUSTAINABLE CDEMA PARTICIPATING STATES THROUGH COMPREHENSIVE DISASTER MANAGEMENT.
The Medium to Long Term Results of the CDM Strategy 2014-2024

Table 1 below illustrates the emerging priorities defined by stakeholders for the region for the medium to long term. In keeping with the guiding principles, the emerging priorities were elaborated using a results based management approach. As such, regional outcomes were articulated, all of which support the achievement of the overarching regional goal of the CDM Strategy 2014 - 2024.

</table>
The overarching objectives of each of the outcomes are briefly defined below and will provide the focus of actions to be undertaken at various levels. The Priority Areas provided below are individually followed by the direct and indirect regional outcomes.

12.1. Priority Area #1

Priority Area #1 seeks to address the institutional arrangements and capacity at the national and regional levels by:

1. Strengthening capacities for the implementation, monitoring and evaluation of CDM;
2. Addressing the required enabling legislative, strategic and policy framework;
3. Aligning CDM priorities amongst all partners, particularly development partners, with that of the collective national priorities as articulated in the CDM Strategy 2014 - 2024;
4. Addressing the allocation of the various types of resources to meet the needs of countries;
5. Maintaining a focus and capacity for preparedness, response and recovery

Priority Area #1:

PROGRESS: the enabling environment (policy, legislation and strategies) for CDM implementation at the national level has been advanced. NEOCs have been strengthened for effective inter-agency coordination with clearly identified roles and responsibilities supported by legislation.

RECOMMENDATION: The process of incorporation of CC and gender considerations into these policy and regulatory frameworks must be strengthened. There is scope for the assessment of the effectiveness of the national coordination mechanisms.
Figure 7: Priority Area #1 and regional outcomes

12.2. Priority Area #2:

Priority Area #2 seeks to address the information, knowledge management and learning at all levels by:

1. Emphasising the role that existing and expanded knowledge networks will continue to play in the information required for sound and rational decision-making;

2. Addressing the technological backbone that will support data sharing for fact-based policy and decision making;

3. Emphasising the critical role that local and community level actors will play in the generation of data decision making and risk assessment processes;

4. Highlighting the need for the generation and application of educational and training materials that will support learning and continued development of CDM stakeholders.

Priority Area #2:

Enhanced Management of CDM Knowledge (2007 - 2012)

PROGRESS: information about disaster preparedness in case of an emergency, disaster management plans, policies and guidelines have been in existence and accessible. However, people are severely affected by disasters which may be attributed to the fact that the information available is not transformed into life-saving knowledge for the communities at risk.

RECOMMENDATION: Greater coordination in the development of content and delivery of training is required during the next strategic period. This should be guided by a regional educational policy.
Figure 8: Priority Area #2 and regional outcomes

**REGIONAL OUTCOMES:**

1. **Regional Disaster Risk Management Network for informed decision-making at all levels improved**
2. **Integrated Systems for fact-based policy and decision making established**
3. **Incorporation of community and sectoral based knowledge into risk assessment improved**
4. **Educational and training materials for CDM standardised, improved and applied in the region**
5. **CDM is integrated into policies, strategies and legislation by Participating States**
6. **Strengthened coordination for preparedness, response and recovery at the national and regional levels**
7. **Hazard information integrated into development planning and work programming for priority sectors**
8. **Strategic Disaster Risk Management programming for priority sectors improved**
9. **Community-Based Disaster Management capacity built/strengthened for vulnerable groups**
10. **Hazard information integrated into development planning and work programming for priority sectors**

**PRIORITY AREA #2: INCREASED AND SUSTAINED KNOWLEDGE MANAGEMENT AND LEARNING FOR CDM**

**PROGRESS:** Much progress in advancing the mainstreaming of DRM into national policies, planning processes and decision-making at all levels and across key sectors was made.

**RECOMMENDATION:** There is need for the development of more DRM plans within sectors which are congruent with the National Sustainable Development Plans/Strategies and CDM policies. Additionally, more evidence of the integration of climate change adaptation and gender into sector plans must take place.

---

**12.3. Priority Area #3:**

**PRIORITY AREA #3 SEeks to address how sector stakeholders plan, coordinate and implement CDM at the national and regional levels by:**

1. Promoting DM programmes in sectors;
2. Integrating hazard and disaster information and concerns into sector development agendas;
3. Highlighting the need for investing in disaster-proof measures/initiatives by sectors;
4. Coordinating preparedness, response and recovery efforts amongst various stakeholders

**Priority Area #3:**

**DRM mainstreamed into Key Sectors (2007 – 2012)**

**PROGRESS:** Much progress in advancing the mainstreaming of DRM into national policies, planning processes and decision-making at all levels and across key sectors was made.

**RECOMMENDATION:** There is need for the development of more DRM plans within sectors which are congruent with the National Sustainable Development Plans/Strategies and CDM policies. Additionally, more evidence of the integration of climate change adaptation and gender into sector plans must take place.
12.3.1 Mainstreaming CDM in Priority Sectors

National Disaster Management Organisations, which comprises several sectors, are the national level actors responsible for the delivery of CDM results. Governments in particular have a crucial role in advancing CDM at both the sector and community levels. Their role in facilitating and coordinating the mainstreaming of CDM throughout sectors is of paramount importance and must always be accounted for in the delivery of the CDM Strategy 2014 - 2024. Various sectors have articulated or updated Sector Plans at the regional level, which must be increasingly adapted at the national level.

The priority sectors that were operationalised in the former strategic period (2007 - 2012) were (1) Health (2) Education (3) Tourism (4) Agriculture (5) Civil Society. These sectors be continually be engaged and two additional sectors have been identified for greater engagement and inclusion into the CDM Framework and Governance Mechanism for the strategic period of 2014 - 2024, which are (1) Finance and Economic Development and (2) Physical and Environment Planning.

The physical and environmental planning sector have traditionally been the regulation of physical development, the prevention of environmental degradation, as well as the conservation of bio-diversity and ecosystem functions and as principal planning and implementing entities in the management of climate change adaptations within the broader national framework.

The increasing engagement with the physical and environmental planning sector should lead to an improved landscape in the implementation of climate change adaptation and an enhanced framework of environmental management. This will maximise ecosystem services, thereby mitigating losses from disasters while contributing towards securing livelihoods within the region.

Improved land use planning, the increased application of hazard and vulnerability assessments to guide development planning and environmental impact assessments processes are critical areas of convergence and action required within the sector.

Integrated Coastal Zone and Watershed Management are traditional tools available for environmental management and Climate Change Adaptation measures are increasingly being factored into practical methodologies applied at the national level. There is scope for the full treatment of hazard mitigation and for disaster recovery and rehabilitation efforts to account for the maintenance of ecosystem values and functions within pre-existing and new tools under development. In particular, decisions taken post-hazard event should not result in the further degradation of habitats, which may support livelihoods and reduce the biodiversity values of an area. Therefore, the natural environment should feature within the scope of disaster preparedness to ensure that the selection of resettlement and development sites does not result in the further loss of biodiversity and environmental degradation.

In the context of the finance and economic development sectors, the role of risk transfer and disaster financing products is critical for assisting CDEMA participating states in response and recovery phases of disaster management. Further, the role of finance and economic development in advancing national disaster management agendas is critical since progress can only be sustained through national buy-in, which is translated in the form of increased revenue and investment in the national disaster management programme.
12.4. Priority Area #4:

**PROGRESS:** The number of communities with disaster management programmes has increased. Increasingly, communities are employing the HVA process to develop their plans.

**RECOMMENDATION:** There is continued need for increased community participation in exercises; greater access of communities to DM products (hazard maps, etc.) and greater penetration of EWS. Effectiveness of the committees at the community level must be measured.

**Priority Area #4 SEeks to Address Community Level Vulnerability Within the Overall Framework for Disaster Management by:**

1. Building community level capacity for Community-based Disaster Management;
2. Harnessing the knowledge within communities to refine national level standards, knowledge and procedures;
3. Improving and further vertically integrating early warning systems;
4. Emphasising the need to safeguard livelihoods in addition to assets and life;
5. Emphasising the need to focus on actions that will address vulnerable groups and how they are impacted by hazard events.
Figure 10: Priority Area #4 and regional outcomes

**REGIONAL OUTCOMES:**

**4.1** Standards for safe communities developed, agreed and applied

**4.2** Community-Based Disaster Management capacity built/strengthened for vulnerable groups

**4.3** Community Early Warning Systems, integrated, improved and expanded

**4.4** Community livelihoods safeguarded and strengthened through effective risk management

**1.1** National Disaster Organisations and CDEMA CU strengthened for effective support of the implementation, monitoring and evaluation of CDM

**1.4** Strengthened coordination for preparedness, response and recovery at the national and regional levels

**2.1** Regional Disaster Risk Management Network for informed decision-making at all levels improved

**2.2** Integrated systems for fact-based policy and decision making established

**2.3** Incorporation of community and sectoral based knowledge into risk assessment improved

**2.4** Educational and training materials for CDM standardised, improved and applied in the region

**3.1** Strategic Disaster Risk Management programming for priority sectors improved

**PRIORITY AREA #4: STRENGTHENED AND SUSTAINED COMMUNITY RESILIENCE**
Climate change can endanger the achievement of targets set in national, regional and international development agendas.
CROSS-CUTTING THEMES

The strategic period of 2007 - 2012 was defined by the presence of three cross-cutting themes which featured in the planning and implementation phases of the strategy at the national level. The three cross-cutting themes were maintained and an additional one was added for the new strategic period. The cross cutting themes are:

- **Gender**
- **Climate Change**
- **ICT**
- **Environmental Sustainability**

These cross-cutting themes will be bridged into the new 10-year strategic period and are discretely addressed in the complement of future desired state statements (see Figure 2 on page 39). For instance, a clear articulation of the need of the required technological backbone to implement the strategy is addressed for knowledge management (information) and operational readiness (communications) in statements 2 and 4, respectively. There is the explicit connection expressed for the harmonisation of DRR and CCA in statement 5. Gender-differentiated impacts and the manner in which they should be addressed at all levels and stages are addressed in statement 6. Gender differentiated impacts will be accounted for both women and men with the possible performance of gender analyses as a precursor to the formulation of country work programmes and national strategies, which incorporate the input and feedback from practitioners and stakeholders involved in development work.

13.1. Climate Change
Growing evidence of the adverse effects of heightened levels of greenhouse gas emissions on hydrological, terrestrial and marine systems point to the continued need for Caribbean countries to mitigate and adapt to climate change. The majority of Caribbean countries being SIDS, which are vulnerable to the effects of climate variability and change, must address the increasing costs of natural disasters and the impacts on the built and natural environment, economies, health and safety as well as livelihoods. The effects of climate change can have serious consequences on the region’s productive sectors, especially tourism, due to the proximity of major infrastructure to low lying coastal areas and agriculture, based on the effects of project droughts and higher and irregular rainfall patterns. Climate change can endanger the achievement of targets set in national, regional and international development agendas and therefore, countries must proactively address the very real threat that it poses. The integration of disaster risk...
reduction and climate change adaptation in pursuit of sustainable development goals, should lead to the ultimate goal of reducing vulnerability to climate related hazards and would result in the enhancement of preparedness and response to climate hazards, the reduction of the potential impacts of climate change on development and livelihood security, the more efficient use of financial, human and natural resources and the increase in effectiveness and sustainability of both climate change adaptation and hazard mitigation approaches (CDEMA).

13.2. Gender Mainstreaming

Gender mainstreaming in CDM entails the assessment of the differences in vulnerabilities between women and men, girls and boys, and how these vulnerabilities should be taken into account in the design of policies, strategies and programmes aimed at safeguarding our populations in the face of the negative effects of disasters and in the recovery and reconstruction thereof. (Adapted from Kambon, 2013; Joseph-Brown & Tuiloma-Sua, 2012; UNISDR, UNDP and IUCN, 2009).

Social and economic data in the Caribbean suggest that the conditions of women in their capacity as heads of households, income earners and community activists, often leave them disadvantaged when compared to their male counterparts. For example, female rates of unemployment have been found to be higher than that of males in most countries in the region. In Grenada for example, data for 2007 - 2008 suggested that the unemployment rate for women was 49.6% compared with that of men which was 25.3%. Women more often than men, when they are heads of households, live in single income earning households and because women on average are found in the lower wage segment of the labour market, they have less access to resources and assets. Women often earn less than their male counterparts because of the existing wage gap, leaving female headed households disadvantaged1. As a result, female headed households are significantly represented among poor households, thus increasing their vulnerability at the time of disasters and increasing their challenges in bouncing back after an event.

Three basic needs will assist in mainstreaming gender in DRM:

- The presence or enhancement of legal or policy frameworks that enable gender mainstreaming into DRM in the region. The CDM framework provides the guiding principles within which DRM in the region is structured and implemented.
- The capacity at the regional, national and sub-national levels, wherever DRM is being implemented, to undertake gender analysis and the ability to formulate gender sensitive strategies, plans and programmes in the pre-disaster and post-disaster phases of DRM.
- The framework where the gender skills within research institutions devoted to a better understanding of gender differentials collaborate with civil society organisations of women and men, at the level of the communities, national, regional and development partners to attain greater gender equality.

13.3. Information and Communications Technology (ICT)

The term ‘ICT’ covers a range of technologies for getting, storing, retrieving, processing, analysing and transmitting information. This includes networks, computers and any other processing and transmitting equipment and software. It can cover a wide range of system designs and configurations. (BusinessTech Research Inc., 2010). ICT activities must operate

---

1 Nopo in his study indicates that “circa 2007, on average, men earn 10% more than women in the region. Men earn more than women at all ages, at every level of education, in all types of employment (self-employed, employers, and employees) and in both large and small firms. Only in rural areas do women earn on average the same as their male counterparts. \[\]
within a framework of availability during normal and emergency conditions and that information is secured by means of risk management procedures. The intention is to cost-effectively plan for abnormalities in normal circumstances from the viewpoint of operational demands and to create a solid foundation for ICT preparedness in emergency conditions.

National and regional disaster management organisations in the Caribbean must have the capability to effectively communicate, transfer and manage information, as required to support their emergency response activities, before, during and after disaster events. Moreover, software and hardware platforms must facilitate knowledge management initiatives within and between institutions in the region. The ICT capacity and capabilities must be strengthened to facilitate greater collaboration, learning and efficiency within the CDEMA System.

13.4. Environmental Sustainability

The natural environment is equally affected and impacted during a disaster. However, it does not feature as prominently within efforts geared towards the restoration of the built environment. As a result, the natural environment is typically relegated in the discussion of development interventions and actions deserving of investment during restoration and rehabilitation phases. The region’s natural assets comprised of critical resources such as coral reefs, mangroves and other types of wetlands. Forests, rivers and other terrestrial and marine ecosystems are the foundation of all national economies and sustainable livelihoods which rely on tourism, fisheries and agriculture, which are chief amongst the region’s economic activity. Ecosystem services provided by the natural environment are not fully valued and factored into the DRR and economic frameworks. Whilst environmental considerations may be taken into account at the planning and mitigation phases of the disaster management cycle, in particular, they are seldom systematically addressed during the rehabilitation and restoration phases. Therefore, pervasive incentives may prevail for the further deterioration of the natural environment at the time when ecosystems and their attendant functions should be restored to full functioning capacity in tandem with the built environment. The restoration and rehabilitation of the natural environment at the same time when the built environment may be acted upon can serve to restore economic activity, ensure the conservation of biodiversity and critical habitats and re-establish sustainable livelihoods within affected communities.

The regulation of physical development, the prevention of environmental degradation and the conservation of biodiversity and ecosystem functions which support livelihoods throughout the Caribbean region are essential functions which must be addressed within the context of Disaster Risk Reduction. The current role that sound, physical planning and environmental management will continue to play in risk management, and the importance that civil society and public and private sectors will play in fulfilling the vision of an enhanced and strengthened framework for the management of healthy ecosystems2 and the physical environment that can make a valuable contribution to disaster risk reduction, climate change adaptation and the maintenance of sustainable livelihoods, must be fully embraced.

---

2 Ecosystems are defined as dynamic complexes of plants, animals and other living communities and their non-living environment interacting as functional units (Millennium Ecosystem Assessment, 2005). They are the basis of all life and livelihoods, and are systems upon which major industries are based, such as agriculture, fisheries, timber and other extractive industries as well as tourism. The range of goods and other benefits that people derive from ecosystems contributes to the ability of people and their communities to withstand and recover from disasters. The term “sustainable ecosystems” or ‘healthy ecosystems’, implies that ecosystems are largely intact and functioning, and that resource use, or demand for ecosystem services, does not exceed supply in consideration of future generations.
THE CDM GOVERNANCE MECHANISM IS AN INNOVATIVE AND PIONEERING, INTER-INSTITUTIONAL PARTNERSHIP THAT ALLOWS FOR COOPERATION, COORDINATION AND PARTICIPATION.
The CDM Governance Mechanism is an innovative and pioneering, inter-institutional partnership that allows for cooperation, coordination and participation...

The CDM Governance Mechanism (Figure 11) has its genesis in the desire of Caribbean DRM stakeholders to mainstream Comprehensive Disaster Management (CDM) into key sectors both at the regional and national levels.

The establishment of the CDM Coordination and Harmonisation Council (CHC) is further underpinned by the philosophical approach of Comprehensive Disaster Management, of which one of the guiding tenets is the need to engage all levels of society in disaster risk management (CDEMA, 2012).

The review and elaboration of this Strategy, with the end of the implementation period for the Enhanced CDM Strategy in December 2012, further enhanced the CDM Governance Mechanism articulated in Priority Area #3. Representation from the initial sector partners donors and CDEMA PS, which comprise the CDM CHC, is further enhanced with the strengthening of the Finance Sector and the inclusion of the Economic Development, Physical Planning and Environment Sectors for the upcoming 10-year period. The CDM GM is an innovative and pioneering, inter-institutional partnership that allows for cooperation, coordination and participation in the mainstreaming of disaster risk reduction at the sector level across the region, whose links will be further strengthened over the upcoming strategic period.
14.2. Financing the Strategy

This plan comprises the priority actions that should be undertaken and indicative resources required to achieve the desired output and outcome level results of this Strategy.

The elaboration of mechanisms for the mobilisation and allocation of resources to finance the CDM strategy is critical to its success.

To provide greater guidance in the allocation of resources for advancing the Regional CDM Strategy 2014 - 2024, CDM Partners have made input to the elaboration of a draft Implementation Plan (IP), which will consolidate the priority actions and output results that should be undertaken and indicative resources required to achieve the desired outcome level results of this Strategy. Further, the IP will allow for the identification of the best suited institutions for executing the actions, and for the identification of the best combination of partnerships for achieving the results. It is therefore desirable that CDM partners supporting CDM related activities in the region utilise the CDM Strategy 2014 - 2024 and the supporting Implementation Plan to guide their programming interventions. The Implementation Plan is expected to be completed and available for dissemination to partners by December 2015 which will be the end of the first year of implementation of the new Strategy.
Sustained fund mobilisation for the CDM Strategy will be facilitated by enhanced coordination and collaboration between key CDM partners, which will be promoted and sustained through the existing CDM Governance Mechanism Platform. This mechanism is a structure established specifically for providing technical and policy guidance in the roll out of the previous regional CDM Strategy 2007 - 2012. This role and responsibility has been expanded to include fund mobilisation for the Regional CDM Strategy 2014 - 2024, with the agreement of stakeholders.

In addition, the new Monitoring and Evaluation (M&E) system is expected to play a critical role in supporting fund mobilisation since the system will provide decision makers – CDEMA Participating States, Development Partners and the CDEMA CU – with information related to gaps, progress and lessons learned in the implementation of CDM.

Collectively, the IP, Monitoring System (M&E) and CDM Governance Mechanism will provide the systems for strategically guiding the mobilisation and allocation of resources for advancing the CDM agenda at the national and regional levels.
THE KEY TOOL TO BE UTILISED FOR MONITORING AND EVALUATING THE CDM STRATEGY WILL BE A PERFORMANCE MEASUREMENT FRAMEWORK...
RESULTS BASED MONITORING, EVALUATION AND REPORTING

The key tool to be utilised for monitoring and evaluating the CDM Strategy will be a Performance Measurement Framework which will be online and accessible by key users of the system.

Key users include CDEMA Participating States, CDM Partners and the CDEMA CU with responsibility for inputting and analysing data. In order to facilitate the evaluation of every outcome, measurable and verifiable indicators and targets have been identified. These targets define a future state for CDM 10 years from now and are referred to as CARIBBEAN 2024.
# Regional Goal, Priority Areas, Regional Outcomes and Indicators

**Regional Goal (RG):** Safer, More Resilient and Sustainable CDEMA Participating States Through Comprehensive Disaster Management

## Priority Area 1 (PA 1): Strengthened institutional arrangements for CDM

**Target 2024:**

- RO 1.1: National Disaster Organizations and CDEMA CUI strengthened for effective support of the implementation, monitoring and evaluation of CDM in Participating States
- RO 1.2: CDEMA CUI is integrated into plans, strategies and legislation by Participating States

## Priority Area 2 (PA 2): Increased and sustained knowledge management and learning for CDM

**Target 2024:**

- RO 2.1: Regional Disaster Risk Management Network for informed decision-making at all levels improved
- RO 2.2: Integrated Systems for fact-based policy and decision making established
- RO 2.3: Integration of community and sectoral based knowledge into risk assessment improved
- RO 2.4: Educational and training materials for CDM standardized, improved and applied in the region

## Priority Area 3 (PA 3): Improved integration of CDM at sectoral levels

**Target 2024:**

- RO 3.1: Strategic Disaster Risk Management programming for priority sectors improved
- RO 3.2: Hazard information integrated into development planning and work programming for priority sectors
- RO 3.3: Incentive programmes developed and applied for the promotion of risk reduction /CCA in infrastructures investment in priority sectors

## Priority Area 4 (PA 4): Strengthened and sustained community resilience

**Target 2024:**

- RO 4.1: Standards for safe communities developed, agreed and applied
- RO 4.2: Community-Based Disaster Management capacity built strengthened for vulnerable groups
- RO 4.3: Community Early Warning Systems, integrated, improved and expanded
- RO 4.4: Community livelihoods safeguarded and strengthened through effective risk management

---

66

Regional CDM Strategy and Results Framework 2014 - 2024
THE NEXT 10-YEAR PERIOD WILL BE THE HARBINGER OF CONTINUED PROGRESS IN ENSURING THAT LIVES ARE SAVED, PROPERTY AND LIVELIHOODS ARE SAFEGUARDED FOR THE BENEFIT OF CARIBBEAN PEOPLE.
CONCLUSION

The 10-year strategic period presents an opportunity for the advancement of Comprehensive Disaster Management within the region. The two initial periods of implementation over a 12-year period have resulted in great strides in the awareness, integration and mainstreaming of CDM as an overarching framework for disaster risk reduction within the region. The 2014 - 2024 strategic period seeks to ensure greater penetration and integration of CDM into new sectors and to reach community actors in an increasing manner.

Four priority areas are proposed to address:

1. Institutional arrangements and capacity at the national and regional levels;
2. Information, knowledge management and learning at all levels;
3. Planning, coordination and implementation at sectoral levels; and
4. Community level concerns and integration within the overall framework for Disaster Management.

The strategy has been informed by broad-based engagement and consultation with national, regional and international partners. It is founded primarily on lessons learned and emerging priorities articulated in the regional and international context. Eighteen participating states, regional and development partners have harmonised programming and therefore, have committed to the success of the strategy. The next 10-year period will be the harbinger of continued progress in ensuring that lives are saved, property and livelihoods are safeguarded for the benefit of Caribbean people.
ANNEX I - DEFINITIONS/GLOSSARY

Building Code
A set of ordinances or regulations and associated standards intended to control aspects of the design, construction, materials, alteration and occupancy of structures that are necessary to ensure human safety and welfare, including resistance to collapse and damage.
Comment: Building codes can include both technical and functional standards. They should incorporate the lessons of international experience and should be tailored to national and local circumstances. A systematic regime of enforcement is a critical supporting requirement for effective implementation of building codes. (UNISDR, 2009)

Capacity
The combination of all the strengths, attributes and resources available within a community, society or organisation that can be used to achieve agreed goals.
Comment: Capacity may include infrastructure and physical means, institutions, societal coping abilities, as well as human knowledge, skills and collective attributes such as social relationships, leadership and management. Capacity also may be described as capability. Capacity assessment is a term for the process by which the capacity of a group is reviewed against desired goals, and the capacity gaps are identified for further actio (UNISDR, 2009)

Capacity Development
The process by which people, organisations and society systematically stimulate and develop their capacities over time to achieve social and economic goals, including through improvement of knowledge, skills, systems, and institutions.
Comment: Capacity development is a concept that extends the term of capacity building to encompass all aspects of creating and sustaining capacity growth over time. It involves learning and various types of training, but also continuous efforts to develop institutions, political awareness, financial resources, technology systems, and the wider social and cultural enabling environment. (UNISDR, 2009)

Climate Change
(a) The Inter-governmental Panel on Climate Change (IPCC) defines climate change as: “a change in the state of the climate that can be identified (e.g., by using statistical tests) by changes in the mean and/or the variability of its properties, and that persists for an extended period, typically decades or longer. Climate change may be due to natural causes; (b) The United Nations Framework Convention on Climate Change (UNFCCC) defines climate change as “a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods”.
Comment: For disaster risk reduction purposes, either of these definitions may be suitable, depending on the particular context. The UNFCCC definition is the more restricted one as it excludes climate changes attributable to natural causes. The IPCC definition can be paraphrased for popular communications as “a change in the climate that persists for decades or longer, arising from either natural causes or human activity.” (UNISDR, 2009)

Climate Change Adaptation
The adjustment in natural or human systems in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities.
Comment: This definition addresses the concerns of climate change and is sourced from the secretariat of the United Nations Framework Convention on Climate Change (UNFCCC). The broader concept of adaptation also applies to non-climatic factors such as soil erosion or surface subsidence. Adaptation can occur in autonomous fashion, for example through market changes, or as a result of intentional adaptation policies and plans. Many disaster risk reduction measures can directly contribute to better adaptation. (UNISDR, 2009)

Climate Variability
Variations in the mean state and other statistics (such as standard deviations, the occurrence of extremes, etc.) of the climate on all temporal and spatial scales beyond that of individual weather events (IPCC, 2007). Departures from long-term averages or trends over seasons or a few years. (CARICOM, 2003)
Community
Rural villages and/or urban neighbourhoods, which include shared experiences, locality, culture, language and social interests. These characteristics imply that a community should have some common cohesive social structures, which can be schools, community policies, common rules and regulations and most often a clearly defined geographical area. It could be difficult for an outsider to identify a community as the description of “where a community starts and ends” and therefore, it depends on feedback from the community itself (UNISDR, 2006). Within the context of the performance measurement frameworks contained in the strategy, it is defined geographically by the Participating State’s electoral districts, irrespective of other prevailing commonalities (Sage Consultancy Services).

The Comprehensive Disaster Management
The management of all hazards through all phases of the disaster management cycle – prevention, mitigation, preparedness, response, recovery and rehabilitation – by all peoples – public and private sectors, all segments of civil society and the general population in hazard prone areas. CDM involves risk reduction & management and integration of vulnerability assessment into the development planning process. (CDEMA).

Contingency Planning
A management process that analyses specific potential events or emerging situations that might threaten society or the environment and establishes arrangements in advance to enable timely, effective and appropriate responses to such events and situations.  
Comment: Contingency planning results in organised and coordinated courses of action with clearly identified institutional roles and resources, information processes, and operational arrangements for specific actors at times of need. Based on scenarios of possible emergency conditions or disaster events, it allows key actors to envision, anticipate and solve problems that can arise during crises. Contingency planning is an important part of overall preparedness. Contingency plans need to be regularly updated and exercised. (UNISDR, 2009)

Coping Capacity
The ability of people, organisations and systems, using available skills and resources, to face and manage adverse conditions, emergencies or disasters.  
Comment: The capacity to cope requires continuing awareness, resources and good management, both in normal times as well as during crises or adverse conditions. Coping capacities contribute to the reduction of disaster risks. (UNISDR, 2009)

Cross-Cutting Theme
A subject, topic or interconnected topics that flow across multiple sectors and impacts in more than one field. Cross-cutting themes require action in multiple fields and should be integrated into all areas of development agendas/programmes (adapted from a number of UN references on governance and development planning reports/publications)

Disaster
A serious disruption of the functioning of a community or a society involving widespread human, material, economic or environmental losses and impacts, which exceeds the ability of the affected community or society to cope using its own resources.  
Comment: Disasters are often described as a result of the combination of: the exposure to a hazard; the conditions of vulnerability that are present; and insufficient capacity or measures to reduce or cope with the potential negative consequences. Disaster impacts may include loss of life, injury, disease and other negative effects on human physical, mental and social well-being, together with damage to property, destruction of assets, loss of services, social and economic disruption and environmental degradation. (UNISDR, 2009)

Disaster Risk
The potential disaster losses, in lives, health status, livelihoods, assets and services, which could occur to a particular community or a society over some specified future time period.  
Comment: The definition of disaster risk reflects the concept of disasters as the outcome of continuously present conditions of risk. Disaster risk comprises different types of potential losses which are often difficult to quantify. Nevertheless, with knowledge of the prevailing hazards and the patterns of population and socio-economic development, disaster risks can be assessed and mapped, in broad terms at least. (UNISDR, 2009)

Disaster Risk Management
The systematic process of using administrative directives, organisations, and operational skills and capacities to implement strategies, policies and improved coping capacities in order to lessen the adverse impacts of hazards and the possibility of disaster.  
Comment: This term is an extension of the more general term “risk management” to address the specific issue of disaster risks. Disaster risk management aims to avoid, lessen or transfer the adverse effects of hazards through activities and measures for prevention, mitigation and preparedness. (UNISDR, 2009)
Disaster Risk Reduction
The concept and practice of reducing disaster risks through systematic efforts to analyse and manage the causal factors of disasters, including through reduced to hazards, lessened vulnerability of people and property, wise management of land and the environment, and improved preparedness for adverse events.

Comment: A comprehensive approach to reduce disaster risks is set out in the United Nations-endorsed Hyogo Framework for Action, adopted in 2005, whose expected outcome is “the substantial reduction of disaster losses, in lives and the social, economic and environmental assets of communities and countries.” The International Strategy for Disaster Reduction (ISDR) system provides a vehicle for cooperation among governments, organisations and civil society actors to assist in the implementation of the Framework. Note that while the term “disaster reduction” is sometimes used, the term “disaster risk reduction” provides a better recognition of the ongoing nature of disaster risks and the ongoing potential to reduce these risks. (UNISDR, 2009)

Early Warning System
The set of capacities needed to generate and disseminate timely and meaningful warning information to enable individuals, communities and organisations threatened by a hazard to prepare and to act appropriately and in sufficient time to reduce the possibility of harm or loss.

Comment: This definition encompasses the range of factors necessary to achieve effective responses to warnings. A people-centred early warning system necessarily comprises four key elements: knowledge of the risks; monitoring, analysis and forecasting of the hazards; communication or dissemination of alerts and warnings and local capabilities to respond to the warnings received. The expression “end-to-end warning system” is also used to emphasise that warning systems need to span all steps from hazard detection through to community response. (UNISDR, 2009)

Ecosystem Services
The benefits that people and communities obtain from ecosystems.

Comment: This definition is drawn from the Millennium Ecosystem Assessment. The benefits that ecosystems can provide include “regulating services” such as regulation of floods, drought, land degradation and disease, along with “provisioning services” such as food and water, “supporting services” such as soil formation and nutrient cycling, and “cultural services” such as recreational, spiritual, religious and other non-material benefits. Integrated management of land, water and living resources that promotes conservation and sustainable use provide the basis for maintaining ecosystem services, including those that contribute to reduced disaster risks. (UNISDR, 2009)

Emergency Management
The organisation and management of resources and responsibilities for addressing all aspects of emergencies, in particular preparedness, response and initial recovery steps.

Comment: A crisis or emergency is a threatening condition that requires urgent action. Effective emergency action can avoid the escalation of an event into a disaster. Emergency management involves plans and institutional arrangements to engage and guide the efforts of government, non-government, voluntary and private agencies in comprehensive and coordinated ways to respond to the entire spectrum of emergency needs. The expression “disaster management” is sometimes used instead of emergency management. (UNISDR, 2009)

Environmental Degradation
The reduction of the capacity of the environment to meet social and ecological objectives and needs.

Comment: Degradation of the environment can alter the frequency and intensity of natural hazards and increase the vulnerability of communities. The types of human-induced degradation are varied and include land misuse, soil erosion and loss, desertification, wildland fires, loss of biodiversity, deforestation, mangrove destruction, land, water and air pollution, climate change, sea level rise and ozone depletion. (UNISDR, 2009)

Environmental Impact Assessment
Process by which the environmental consequences of a proposed project or programme are evaluated, undertaken as an integral part of planning and decision-making processes with a view to limiting or reducing the adverse impacts of the project or programme.

Comment: Environmental impact assessment is a policy tool that provides evidence and analysis of environmental impacts of activities from conception to decision-making. It is utilised extensively in national programming and project approval processes and for international development assistance projects. Environmental impact assessments should include detailed risk assessments and provide alternatives, solutions or options to deal with identified problems. (UNISDR, 2009)

Environmental Sustainability
See definitions for “Sustainable” and “Sustainable Development”
Gender
The social attributes and opportunities associated with being male and female and the relationships between women and men and girls and boys, as well as the relations between women and those between men. These attributes, opportunities and relationships are socially constructed and are learned through socialisation processes. They are context/time-specific and changeable. Gender determines what is expected, allowed and valued in a woman or a man in a given context. In most societies there are differences and inequalities between women and men in responsibilities assigned, activities undertaken, access to and control over resources, as well as decision-making opportunities. Gender is part of the broader socio-cultural context. (UNISDR, UNDP and IUCN, 2009)

Gender Analysis
Assessment of the vulnerabilities and inequalities between men and women before, during and after a disaster event. It requires collection of sex disaggregated data for baseline and situational analysis. Analysis of this data leads to the development of policies, programmes and projects which take account of gender in all phases of design and implementation and close existing gaps. A process of understanding the different activities and responsibilities of women and men, in responsibilities assigned, activities undertaken, access to and control over resources, as well as decision-making opportunities. Gender analysis helps us understand the roles and relations of men and women. It frames questions about who does what, when and why. (Kambon, 2013)

Gender Mainstreaming
Mainstreaming a gender perspective is the process of assessing the implications for women and men of any planned action, including legislation, policies or programmes, in all areas and at all levels. It is a strategy for making women’s as well as men’s concerns and experiences an integral dimension of the design, implementation, monitoring and evaluation of policies and programmes in all political, economic and societal spheres so that women and men benefit equally and inequality is not perpetuated. The ultimate goal is to achieve gender equality. (UNISDR, UNDP and IUCN, 2009)

Hazard
A dangerous phenomenon, substance, human activity or condition that may cause loss of life, injury or other health impacts, property damage, loss of livelihoods and services, social and economic disruption, or environmental damage.
Comment: The hazards of concern to disaster risk reduction as stated in footnote 3 of the Hyogo Framework are “… hazards of natural origin and related environmental and technological hazards and risks.” Such hazards arise from a variety of geological, meteorological, hydrological, oceanic, biological, and technological sources, sometimes acting in combination. In technical settings, hazards are described quantitatively by the likely frequency of occurrence of different intensities for different areas, as determined from historical data or scientific analysis. (UNISDR, 2009)

Impact (Disaster Risk Context)
A sudden occurrence without prior warning (EMA Manual 1998)

Impact (Results Based Context)
Positive and negative, primary and secondary long-term effects produced by a development intervention, directly or indirectly, intended or unintended. (OECD DAC)

Livelihood
A livelihood comprises the capabilities, assets (including both material and social resources) and activities required for a means of living. A livelihood is sustainable when it can cope with and recover from stress and shocks and maintain or enhance its capabilities and assets both now and in the future, while not undermining the natural resource base. (Chambers, 1991). Livelihoods are viewed as systems and provide a way to understand: (1) the assets people draw upon, (2) the strategies they develop to make a living, (3) the context within which a livelihood is developed, and (4) those factors that make a livelihood more or less vulnerable to shocks and stresses. Assets may be tangible, such as food stores and cash savings, as well as trees, land, livestock, tools, and other resources. Assets may also be intangible such as claims one can make for food, work, and assistance as well as access to materials, information, education, health services and employment opportunities. Another way of understanding the assets, or capitals, that people draw upon to make a living is to categorise them into the following six groups: human, social, natural, physical, financial, and political capitals. Livelihoods are formed within social, economic and political contexts. Institutions, processes and policies, such as markets, social norms, and land ownership policies affect the ability to access and use assets for a favourable outcome. As these contexts change they create new livelihood obstacles or opportunities. Livelihoods are also shaped by the changing natural environment. The quality of soil, air and water; the climatic and geographic conditions; the availability of fauna and flora and the frequency and intensity of natural hazards all influence livelihood decisions. How people access and use these assets, within the aforementioned social, economic, political and environmental contexts, form a livelihood strategy.
The range and diversity of livelihood strategies are enormous. An individual may take on several activities to meet his/her needs. One or many individuals may engage in activities that contribute to a collective livelihood strategy. Within households, individuals often take on different responsibilities to enable the sustenance and growth of the family. In some cultures, this grouping may expand to a small community, in which individuals work together to meet the needs of the entire group. The strength of a given livelihood is not only measured by its productive outcomes, but equally by its resilience to shocks, seasonal changes and trends. Shocks might include natural disasters, wars, and economic downturns. Availability of resources, income-generating opportunities, and demand for certain products and services may fluctuate seasonally. More gradual and often predictable, trends in politics and governance, technology use, economics, and availability of natural resources, can pose serious obstacles to the future of many livelihoods. These changes impact the availability of assets and the opportunities to transform those assets into a “living”. Under such conditions, people must adapt existing strategies or develop new strategies in order to survive. One final important characteristic of livelihoods is their interdependence. Very few livelihoods exist in isolation. A given livelihood may rely on other livelihoods to access and exchange assets. Traders rely on farmers to produce goods, processors to prepare them, and consumers to buy them. Livelihoods also compete with each other for access to assets and markets. Thus positive and negative impacts on any given livelihood will, in turn, impact others. This is a particularly important consideration when planning livelihood assistance. (International Recovery Platform, UNDP and ISDR)

**Logical Framework/ Logic Model**
Management tool used to improve the design of interventions, most often at the project level. It involves identifying strategic elements (inputs, outputs, outcomes, impact) and their causal relationships, indicators, and the assumptions or risks that may influence success and failure. It thus facilitates planning, execution and evaluation of a development intervention. (OECD DAC)

**Mitigation**
The lessening or limitation of the adverse impacts of hazards and related disasters.

**Comment:** The adverse impacts of hazards often cannot be prevented fully, but their scale or severity can be substantially lessened by various strategies and actions. Mitigation measures encompass engineering techniques and hazard-resistant construction as well as improved environmental policies and public awareness. It should be noted that in climate change policy, “mitigation” is defined differently, being the term used for the reduction of greenhouse gas emissions that are the source of climate change. (UNISDR, 2009)

**Outcome**
The likely or achieved short-term and medium-term effects of an intervention's outputs. (OECD DAC)

**Outputs**
The products, capital goods and services which result from a development intervention; may also include changes resulting from the intervention which are relevant to the achievement of outcomes. (OECD DAC)

**Performance Indicator**
A variable that allows the verification of changes in the development intervention or shows results relative to what was planned. (OECD DAC)

**Performance Measurement**
A system for assessing performance of development interventions against stated goals. (OECD DAC)

**Performance Monitoring**
A continuous process of collecting and analysing data to compare how well a project, programme, or policy is being implemented against expected results. (OECD DAC)

**Preparedness**
The knowledge and capacities developed by governments, professional response and recovery organisations, communities and individuals to effectively anticipate, respond to, and recover from, the impacts of likely, imminent or current hazard events or conditions.

**Comment:** Preparedness action is carried out within the context of disaster risk management and aims to build the capacities needed to efficiently manage all types of emergencies and achieve orderly transitions from response through to sustained recovery. Preparedness is based on a sound analysis of disaster risks and good linkages with early warning systems, and includes such activities as contingency planning, stockpiling of equipment and supplies, the development of arrangements for coordination, evacuation and public information, and associated training and field exercises. These must be supported by formal institutional, legal and budgetary capacities. The related term “readiness” describes the ability to quickly and appropriately respond when required. (UNISDR, 2009)
Prevention
The outright avoidance of adverse impacts of hazards and related disasters.
Comment: Prevention (i.e. disaster prevention) expresses the concept and intention to completely avoid potential adverse impacts through action taken in advance. Examples include dams or embankments that eliminate flood risks, land-use regulations that do not permit any settlement in high risk zones, and seismic engineering designs that ensure the survival and function of a critical building in any likely earthquake. Very often the complete avoidance of losses is not feasible and the task transforms to that of mitigation. Partly for this reason, the terms prevention and mitigation are sometimes used interchangeably in casual use. (UNISDR, 2009)

Programme-Based Approach
A way of engaging in development cooperation based on the principle of coordinated support for a locally owned programme of development. The approach includes four key elements:

- Leadership by the host country or organisation.
- A single programme and budget framework.
- Donor coordination and harmonisation of procedures.
- Efforts to increase the use of local procedures over time with regard to programme design and implementation, financial management, and monitoring and evaluation.” (Baastel-ESL (Canada-Jamaica), 2007)

Public Awareness
The extent of common knowledge about disaster risks, the factors that lead to disasters and the actions that can be taken individually and collectively to reduce exposure and vulnerability to hazards.

*Comment:* Public awareness is a key factor in effective disaster risk reduction. Its development is pursued, for example, through the development and dissemination of information through media and educational channels, the establishment of information centres, networks, and community or participation actions, and advocacy by senior public officials and community leaders. (UNISDR, 2009)

Recovery
The restoration, and improvement where appropriate, of facilities, livelihoods and living conditions of disaster-affected communities, including efforts to reduce disaster risk factors.

*Comment:* The recovery task of rehabilitation and reconstruction begins soon after the emergency phase has ended, and should be based on pre-existing strategies and policies that facilitate clear institutional responsibilities for recovery action and enable public participation. Recovery programmes, coupled with the heightened public awareness and engagement after a disaster, afford a valuable opportunity to develop and implement disaster risk reduction measures and to apply the “build back better” principle. (UNISDR, 2009)

Resilience
The ability of a system, community or society exposed to hazards to resist, absorb, accommodate to and recover from the effects of a hazard in a timely and efficient manner, including through the preservation and restoration of its essential basic structures and functions.

*Comment:* Resilience means the ability to “resile from” or “spring back from” a shock. The resilience of a community in respect to potential hazard events is determined by the degree to which the community has the necessary resources and is capable of organising itself both prior to and during times of need. (UNISDR, 2009)

Increasingly, communities must account for the effects that Climate Change may have on their ability to spring back. The inclusion of climate change considerations into development programming will allow countries to remain on their projected paths by minimising economic and environmental losses, thereby ensuring greater sustainability (CDEMA, 2013).

Response
The provision of emergency services and public assistance during or immediately after a disaster in order to save lives, reduce health impacts, ensure public safety and meet the basic subsistence needs of the people affected.

*Comment:* Disaster response is predominantly focused on immediate and short-term needs and is sometimes called “disaster relief”. The division between this response stage and the subsequent recovery stage is not clear-cut. Some response actions, such as the supply of temporary housing and water supplies, may extend well into the recovery stage. (UNISDR, 2009)

Results-Based Management
A management strategy focusing on performance and achievement of outputs, outcomes and impacts. (OECD DAC). Rather than focusing programme/project management efforts on the monitoring of inputs, activities and processes, an RBM approach concentrates on ‘results’ and places emphasis on the following dimensions: Defining realistic results based on appropriate analysis and context; Clearly
identifying programme beneficiaries and designing programmes/projects that meet their needs and priorities; Using results information to make effective management decisions; Monitoring the progress made towards expected results with the use of appropriate indicators (Baastel-ESL (Canada-Jamaica), 2007)

**Risk**
The combination of the probability of an event and its negative consequences.

*Comment:* This definition closely follows the definition of the ISO/IEC Guide 73. The word “risk” has two distinctive connotations: in popular usage the emphasis is usually placed on the concept of chance or possibility, such as in “the risk of an accident”; whereas in technical settings the emphasis is usually placed on the consequences, in terms of “potential losses” for some particular cause, place and period. It can be noted that people do not necessarily share the same perceptions of the significance and underlying causes of different risks. (UNISDR, 2009)

**Risk Assessment**
A methodology to determine the nature and extent of risk by analysing potential hazards and evaluating existing conditions of vulnerability that together could potentially harm exposed people, property, services, livelihoods and the environment on which they depend.

*Comment:* Risk assessments (and associated risk mapping) include: a review of the technical characteristics of hazards such as their location, intensity, frequency and probability; the analysis of exposure and vulnerability including the physical social, health, economic and environmental dimensions; and the evaluation of the effectiveness of prevailing and alternative coping capacities in respect to likely risk scenarios. This series of activities is sometimes known as a risk analysis process. (UNISDR, 2009)

**Risk Management**
The systematic approach and practice of managing uncertainty to minimise potential harm and loss.

*Comment:* Risk management comprises risk assessment and analysis, and the implementation of strategies and specific actions to control, reduce and transfer risks. It is widely practised by organisations to minimise risk in investment decisions and to address operational risks such as those of business disruption, production failure, environmental damage, social impacts and damage from fire and natural hazards. Risk management is a core issue for sectors such as water supply, energy and agriculture whose production is directly affected by extremes of weather and climate. (UNISDR, 2009)

**Safety (Safer)**
The control of recognised hazards to achieve an acceptable level of risk. The maintenance of an environment that is relatively free from actual or potential hazards that can injure people – Industrial Accident Prevention Association

**Sustainable Development**
Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

*Comment:* This definition coined by the 1987 Brundtland Commission is very succinct but it leaves unanswered many questions regarding the meaning of the word development and the social, economic and environmental processes involved. Disaster risk is associated with unsustainable elements of development such as environmental degradation, while conversely, disaster risk reduction can contribute to the achievement of sustainable development, through reduced losses and improved development practices. (UNISDR, 2009)

**Vulnerability**
The characteristics and circumstances of a community, system or asset that make it susceptible to the damaging effects of a hazard.

*Comment:* There are many aspects of vulnerability, arising from various physical, social, economic, and environmental factors. Examples may include poor design and construction of buildings, inadequate protection of assets, lack of public information and awareness, limited official recognition of risks and preparedness measures, and disregard for wise environmental management. Vulnerability varies significantly within a community and over time. This definition identifies vulnerability as a characteristic of the element of interest (community, system or asset) which is independent of its exposure. However, in common use the word is often used more broadly to include the element’s exposure. (UNISDR, 2009)
### ANNEX II -
List of Representatives and Organisations Consulted in the Elaboration of the CDM Strategy, Draft Implementation Plan and the Performance Measurement Framework

<table>
<thead>
<tr>
<th>National Disaster Offices</th>
</tr>
</thead>
<tbody>
<tr>
<td>National Office of Disaster Services (Antigua and Barbuda) – Mr. Philmore Mullin</td>
</tr>
<tr>
<td>Department of Emergency Management (Barbados) – Ms. Judy Thomas, Ms. Kerry Hinds and Ms. Danielle Skeete</td>
</tr>
<tr>
<td>Department of Disaster Management (Anguilla) – Ms. Sherise Brooks</td>
</tr>
<tr>
<td>Department of Disaster Management (Virgin Islands) – Ms. Evangline Inniss</td>
</tr>
<tr>
<td>Office of Disaster Management (Commonwealth of Dominica) – Ms. Merrina Williams, Mr. Steve Joseph</td>
</tr>
<tr>
<td>National Disaster Management Agency (Grenada) – Mr. Terrence Walters</td>
</tr>
<tr>
<td>Civil Defense Commission (Guyana) – Major Kester Craig</td>
</tr>
<tr>
<td>Civil Protection Directorate (Haiti) – Mr. Moïse Jn Pierre</td>
</tr>
<tr>
<td>Office of Disaster Preparedness and Emergency Management (Jamaica) – Mr. Horace Glaze</td>
</tr>

</tbody>
</table>
Caribbean Catastrophe Risk Insurance Facility (CCRIF) – Ms. Ekhosuehi Iyahen
Council of Caribbean Engineering Organisations (CCEO) – Mr. Anthony Farrell, Dr. Myron Chin
Delegation of the European Union to Barbados & OECS – Mr. Anthony Robert, Ms. Camille Wildman
Department For International Development – Caribbean – Mr. Alex Harvey, Mr. Steve Hillier
Help Age International – Mr. Jeffrey James
High Commission of Canada, Ministry of Foreign Affairs Trade and Development (DFATD) – Ms. Natalie Hutchinson, Ms. Guylaine Grenier, Mr. Zahir Meghji
ICSAC Barbados – Dr. Thomas Edward
Inter-American Institute for Cooperation on Agriculture (IICA) – Mr. Kervin Stephenson
International Federation of Red Cross (IFRCS) - Ms. Lorraine Mangwiro, Ms. Reynette Royer, Ms. Cecile Clarke Marshall
Ministry of Health – Jamaica – Dr. Marion DuCasse
Ministry of Health – Saint Lucia – Dr. Alisha Eugene
Ministry of Tourism - The Bahamas – Mr. John Nixon
Organisation of Eastern Caribbean States – Mr. Cornelius Isaac
Pan American Health Organisation (PAHO) – Ms. Lealou Rebelallos, Dr. Dana Van Alphen
UNDP CRMI – Ms. Jacinda Fairholm
UNICEF - Ms Violet Speek-Warnery
United Nations Development Programme – Mr. Marlon Clarke, Mr. Ian King
United Nations International Strategy for Disaster Reduction UNISDR – Mr. Raul Salazar
United Nations Women – Ms. Leah Odle-Benson
University of Guyana – Dr. Paulette Bynoe
UTECH – Mr. Laurence Neufville
UWI DRRC – Dr. Barbara Carby, Ms. Jenna Blackwood
REFERENCES

Caribbean Community. (2005). Caribbean Community Regional Programme of Action: World Conference on Disaster Reduction. CDEMA.

CDEMA. The regional programme and plan of action for Climate Change Adaptation and Disaster Risk Reduction for the Mainstreaming Climate Change into Disaster Risk Management for the Caribbean Region (CCDM) Project. Barbados: CDEMA.

1 Better and increased accountability at all levels would be an integral part of the manner in which institutional arrangements are framed and delivered.
2 The principles encapsulated in Value for Money (VFM) will guide the assessment of efficiency and efficacy of operational efforts at the regional and national levels.
3 This result addresses inclusion into the institutional structures at various levels.
4 The proposed alignment can correspond to existing and new sectoral partners for CDM implementation in addition to various other types of partners. For existing sectoral partners with well-defined work programmes which are aligned to CDM, the goal is for greater penetration, which would have begun during the former period. For the new sectors of concern, which include Finance/Economic Development, Planning and the Environment, it will entail the inclusion of their programming into the new framework.
5 Donor programming and projects in the region have been aligned over time to the regional and national strategies and integrated within the CDM Strategy. Greater levels of integration and deeper penetration will be sought during the upcoming period. CDM programming by necessity must include the treatment of the three cross-cutting themes of Climate Change, ICT and Gender. The existing programming for each of the themes and their relationship to DRR are at varying stages of development and implementation, and therefore, greater penetration into regional and national considerations will be sought during the strategic period.
6 This result can address the need expressed by National Disaster Coordinators to allow for the inclusion of operational and ongoing concerns that are part of the services provided to various stakeholders at the national level.
7 The result takes into account existing and possibly new partners for inclusion into the network apart from the pre-existing Regional Disaster Risk Reduction Network.
8 If Output 2.3 is achieved, it will assist in meeting/achieving Outputs 4.1 and 4.3
9 If Output 2.4 is achieved, it will assist in meeting/achieving Output 4.3
10 This result addresses inclusion of hazard information into the DRM framework, which tends to be more programmatic.
11 If Output 3.2 is achieved, it will assist in meeting/achieving Outputs 2.2, 2.4 and 4.2.
12 If Output 4.3 is achieved, it will assist in meeting/achieving Outputs 3.3.
13 The CDM CHC is supported by six (6) sector sub-committees (SSC), namely education, health, agriculture, tourism, civil society and finance. With the exception of the Finance Sector Sub-Committee, each of the SSC is functioning and is chaired by a regional agency that has agreed to undertake a leadership role for CDM implementation in their respective sectors.
