National Hurricane Center (NHC) Update

According to the National Hurricane Center (NHC) in Miami, Florida, as at 5:00 PM AST, the eye of Hurricane Jerry was located near latitude 23.0 N 65.8 W. Jerry is moving toward the northwest near 14 mph (22km/h), and this general motion is expected to continue today. Jerry is forecast to turn northward on Sunday and then gradually accelerate northeastward early next week.

Maximum sustained winds have increased to near 65 mph (100 km/h) with higher gusts. Little overall change in strength is forecast for the next several days, but short-term fluctuations in intensity are possible. Tropical-storm-force winds extend outward up to 80miles (130 km) from the center.

Updates from Participating States

At this time no impacts have been reported from the CDEMA Participating States.

Caribbean Disaster Emergency Management Agency (CDEMA) Actions

CDEMA CU will continue to monitor the progress of Hurricane Jerry and provide updates if necessary. For more information, please visit www.cdema.org
